Interactive Variety Description System (IVDS)

For preparing the detailed description, the Plant Breeder's Rights Office (PBRO) has released the Interactive Variety Description System (IVDS) in the Internet (https://pbr-ivds.ipaustralia.plantbreeders.gov.au/pbr_ivds/) for the Qualified Persons (QPs).

In the beginning of April 2005, all QPs have officially been notified of this new system giving them access to IVDS with their individual user name and password. The main purpose of the system is to harmonise variety descriptions at both national and international level and make the PBR application process as smooth and efficient as possible.

The IVDS allows QPs to fill in descriptions on-line by accessing relevant test guidelines and selecting specific characteristics with their various states of expressions from the options provided. The IVDS incorporated all of the approved UPOV test guidelines (and some national equivalents where a UPOV test guideline is not available) into interactive forms with easy to use drop-down menus. QPs can "build" their own additional/special characteristics if they are not available in the guideline. The IVDS also accepts statistical information.

The IVDS emphasises the use of "grouping characteristics" in selecting comparator varieties. Finally, it allows QPs to lodge the completed variety descriptions on-line. There is a minimum typing involved in the process.

The PBRO anticipates that the QPs had the opportunity to familiarise themselves with IVDS during the testing and demonstration phase (August – Dec 2004) and could operate the system comfortably. There are step by step on-screen instructions with examples in each step of IVDS, which will assist the QPs to complete the process smoothly. In addition, PBRO is ready to help QPs, if they encounter any problem. Please send an e-mail to pbr@ipaustralia.gov.au if there is a problem in completing the description using IVDS.

Objections and Revocations

Objections to Applications and Requests for Revocation of a Grant or of a Declaration that a Plant Variety is Essentially Derived from Another Plant Variety

The Plant Breeder's Rights scheme is administered consistent with the model law of the *International Convention for the Protection of New Plant Varieties 1991* (UPOV 91), that is, applicants are entitled to protection, in the absence of proof to the contrary.

The Plant Breeder's Rights Office (PBRO) is not required to advocate for the views, assertions, and opinions of persons challenging an application for plant breeder's rights. Those objecting to applications, requesting revocation of a grant, or seeking a declaration that a plant variety is essentially derived from another plant variety should provide sufficient probative evidence to enable the Secretary to be satisfied of their validity of their claims. It cannot be stressed too strongly that all available evidence ought to accompany the application for objection/revocation/declaration at the outset.

Occasionally the PBRO receives comments on applications. The PBRO seeks to give effect to the processes set out in the PBR Act. The Act provides for a formal objection process, and comments are not formal objections. Where members of the public genuinely believe their commercial interests would be affected and that PBR for a proposed variety ought not to be granted, they are encouraged to use the Act's processes, eg. lodging an objection. Comments are simply informal information from the public to a governmental decision maker. The PBRO will generally not engage in further communication with the commentator regarding their comment, although the comment may be valuable in alerting the PBRO to an important matter of which it was previously unaware.

Objections to Applications

A person may make objections to applications for PBR if (i) their commercial interests would be affected adversely, and (ii) the application will not fulfil all the conditions required by the Plant Breeder's Rights Act.

Objections to applications must be lodged with the Registrar no later than six months after the date the description of the variety is published in this journal. The objector must provide evidence of adverse affect on their commercial interests and that the application should not be granted.

The Registrar of the Plant Breeder's Rights Office (PBRO) is required to give a copy of the objection to the applicant. The objection is also available to the general public on request. The applicant has the opportunity to respond to the evidence presented. The Registrar then decides whether or not the objection will be upheld and, subsequently, whether the application will be granted. The PBRO is under no obligation to enter into further dialogue regarding an objection or to communicate reasons why an objection is not upheld. If an objection is upheld it will be notified in this journal.

A payment of \$100 is required on lodgement of the objection. Additional costs of \$75 per hour for work undertaken in relation to the objection will be billed to the objector.

Requests for Revocation, (where an individual's interests are affected) of:

· **a Grant**

· **a Declaration that a Plant Variety is Essentially Derived**

A person may, when their interests are affected adversely, apply for the revocation of:

· a grant of PBR; or

· a declaration that a plant variety is essentially derived from another plant variety.

The person requesting revocation is required to lodge a revocation payment fee of \$500. The person seeking revocation of a grant or declaration that a plant variety is essentially derived from another plant, must provide conclusive evidence of adverse affect on their interests and that the grant should be revoked.

The PBRO also accepts information regarding revocation of grants and declarations of essentially derived plant varieties. Such information must demonstrate conclusively that a grant or declaration should not have been made. All written information will be acknowledged. The PBRO is under no obligation to enter into further communication regarding information provided.

Report on Breeding Issues

A report providing greater clarification of certain ‘difficult’ and sometimes controversial plant breeding issues has been finalised by a panel of experts. The report defines ‘discovery’, ‘selective propagation’ and ‘eligible breeding’ methodologies as well as canvassing questions and answers to a range of situations. The principal areas covered are the source population and associated issues relating to ownership, location, homogeneity, parentage, boundaries, and selection from variable material. The issue of essentially derived varieties and the relationship between the first and the second breeder(s) is also explored. The [final report](#) of the expert panel is available now.

Use of Overseas Data

Overseas Testing/Data

The PBR Act allows DUS data produced in other countries (overseas data) be used in lieu of conducting a comparative trial in Australia provided certain conditions are met; relating to the filing of applications, sufficiency of the data and the likelihood that the candidate variety will express the distinctive characteristic(s) in the same way when grown locally. Briefly the overseas data could be considered where:

- The first PBR application relating to the candidate variety has been lodged overseas, and
- the variety has previously been test grown in a UPOV member country using official UPOV test guidelines and test procedures, (i.e. equivalent to a comparative trial in Australia) and
- either, all the most similar varieties of common knowledge (including those in Australia) have been included in the overseas DUS trial, or
- the new overseas variety is so clearly distinct from all the Australian varieties of common knowledge that further DUS test growing is not warranted, and
- sufficient data and descriptive information is available to publish a description of the variety in an accepted format in Plant Varieties Journal; and to satisfy the requirements of the PBR Act.

Taxa that must be trailed in Australia

It is the policy of PBR office to not accept overseas data for the following taxa due to the wide genotype by environment interactions that have been previously experienced. Varietal descriptions from overseas trials have consistently been different from those obtained from trials grown under Australian conditions. Consequently, for the following taxa a full PBR trial must be conducted in Australia:

Solanum tuberosum Potato

The Qualified Person, in consultation with the agent/applicant, and perhaps other specialists and taxonomists, will need to evaluate the overseas data, test report and photographs to see if the application does fulfil all PBR Office requirements, and then advise the agent/applicant:

- either, to submit Part 2 incorporating a description for publication, any additional data and photographs and to pay the examination fee;
- or, to conduct a DUS trial in Australia, recommending to the applicant/agent which additional varieties of common knowledge to include;

- or, submit Part 2 including additional data (information about similar varieties in Australia to show that they are clearly distinct from the candidate variety that a further DUS test growing including the similar varieties is not warranted and that the variety displays the distinctive characteristics when grown in Australia)

Please note that the PBR office does not obtain overseas DUS test reports on behalf of applicants. It is the sole responsibility of the applicants to obtain these reports directly from the relevant overseas testing authorities. Where applicants already have the report they are advised to submit a certified true copy of the report with the Part 1 application. Applicants, or those duly authorised, may certify the copy.

If you do not have the test report available at the time of Part-1 application then you are advised to submit the Part-1 application without the test report. However, you should make arrangements to procure the DUS test report directly from the relevant testing authority. When the report becomes available, a certified copy should be supplied to the QP and the PBR office.

When the trial is based on an UPOV technical guideline and test report in an official UPOV language (English, German or French), it can be lodged in support of the application. In other cases the test reports must be in English.

The applicant/agent and Qualified Person should use the overseas test report to complete Part 2 of the application, making a decision on how to proceed in view of the completeness of the information, the comparators (if any) used in the overseas DUS trial and their knowledge of similar Australian varieties that may not have been included in the overseas test report.

If a description is based on an overseas test report, Australian PBR will not be granted until after the decision to grant PBR in the country producing the DUS test is made. The final decision on the acceptability of overseas data rests with the PBR office.

PBR Infringement

Grantees should be aware of recent revisions to infringement provisions of the [Plant Breeder's Rights Act 1994](#) (see section 54) and related provisions of the Federal Court Rules (see order 58 rule 27) both of which can be found at the [ComLaw site](#)

On-line Database for PBR Varieties

The PBR Office has a comprehensive service for Internet users ~ a searchable database for all Australian PBR varieties, both past and present. The database features a detailed description and image for every variety granted full rights and basic information for other PBR varieties. Searches by genus, species, common name, variety name and titleholder are some of its many advantages. Varieties for which an application has been lodged but not yet accepted in the PBR scheme are not included in this database. Please browse the Plant Breeder's Rights [on-line](#) database and provide your feedback.

Cumulative Index to Plant Varieties Journal

The cumulative index to the [*Plant Varieties Journal*](#) has been updated to include variety information from all hardcopy versions up to volume 16 issue 3. After that issue the Plant Varieties Journal is only published in the electronic format and there is no need for a cumulative index, as the variety information can be easily searched in the PBR [online database](#) and also by downloading the [*Plant Varieties Journal*](#) electronically.

The final updated version of the cumulative index is available in PBR website. This document has information up to Plant Varieties Journal volume 16 issue 3. The PBR office recommends use its PBR [online database](#) to get most updated information on variety registration. The [online database](#) is updated on a weekly basis.

Applying for Plant Breeder's Rights

Applications are accepted from the original breeder of a new variety (from their employer if the breeder is an employee) or from a person who has acquired ownership from the original breeder. Overseas breeders need to appoint an agent to represent their interests in Australia. Interested parties should contact the PBR office and an accredited Qualified Person experienced in the plant species in question.

Steps in Applying for Plant Breeder's Rights

- Obtain from the breeder a signed Authorisation to act as their agent in Australia for the variety in question if your role is as the Australian agent of an overseas breeder;
- Complete [Part 1](#) of the application form, supplying a photograph of the new variety, paying the [application fee](#), nominating an accredited '[Qualified Person](#)' and, if the variety is an Australian species, despatch as soon as possible a [herbarium specimen](#);
- Engage the services of the nominated accredited 'Qualified Person' to plan and supervise the [comparative growing trial](#);
- Conduct a comparative growing trial to demonstrate Distinctness, Uniformity and Stability ([DUS](#)), complete [Part 2](#) of the application form and paying the [examination fee](#);
- Deposit propagating material in a [Genetic Resources Centre](#).
- Examination of the application by the PBR Office, which may include a field examination of the comparative growing trial; and including
- Publication of a description and photograph comparing the new variety with similar varieties in Plant Varieties Journal, followed by a six-month period for objection or comment.
- Upon successful completion of all the requirements, resolution of objections (if any) and payment of [certificate fee](#), the applicant(s) receive a Certificate of Plant Breeder's Rights.

Requirement to Supply Comparative Varieties

Once an application has been accepted by the PBR office, it is covered by provisional protection. Also it immediately becomes a 'variety of common knowledge' and thus may be required by others as a comparator for their applications with a higher application number.

Applicants are reminded that they are required to release propagative material for comparative testing provided that the material is used for no other purpose and all material relating to the variety is returned when the trial is complete. The expenses incurred in the provision of material for comparative trials are borne by those conducting the trials.

As the variety is already under provisional protection, any use outside the conditions outlined above would qualify as an infringement and would be dealt with under section 53 of the [*Plant Breeder's Rights Act 1994*](#).

Applicants having difficulties procuring varieties for use in comparative trials are urged to contact the PBR office immediately

UPOV Developments

The UPOV Convention provides the international legal framework for the granting of plant breeders' rights which are a key element in encouraging breeders to pursue and enhance their search for improved varieties with benefits such as higher yield and quality and better resistance to pests and diseases. Plant breeders' rights thereby help to enhance sustainable agriculture, productivity, income, international trade and economic development in general.

The members of UPOV are (Status on 5 December 2012):

Albania, Argentina, Australia, Austria, Azerbaijan, Belarus, Belgium, Bolivia, Brazil, Bulgaria, Canada, Chile, China, Colombia, Costa Rica, Croatia, Czech Republic, Denmark, Dominican Republic, Ecuador, European Community, Estonia, Finland, France, Georgia, Germany, Hungary, Iceland, Ireland, Israel, Italy, Japan, Jordan, Kenya, Kyrgyzstan, Latvia, Lithuania, Mexico, Morocco, Netherlands, New Zealand, Nicaragua, Norway, Oman, Panama, Paraguay, Peru, Poland, Portugal, Republic of Korea, Republic of Macedonia, Republic of Moldova, Romania, Russian Federation, Serbia, Singapore, Slovakia, Slovenia, South Africa, Spain, Sweden, Switzerland, Trinidad and Tobago, Turkey, Tunisia, Ukraine, United Kingdom, United States of America, Uruguay, Uzbekistan and Vietnam. (Total 71).

Serbia became a member of UPOV on 5 December 2012.

Further Information on UPOV and its activities is available on the website located at <http://www.upov.int>

The adopted UPOV Technical Guidelines (TG) for testing different plant species are now available for this website at <http://www.upov.int/en/publications/tg-rom/index.html>

European Developments

Community plant variety rights within the European Union are administered by the Community Plant Variety Office (CPVO) in Angers, France. With more than 2,600 applications per year, the CPVO receives the highest number of requests for variety protection among the members of UPOV. The CPVO provides for one application, one examination and one title of protection that is valid and enforceable in all 27 members of the European Union.

The potential applicants for Plant Variety Rights within European Union are requested to consult [Notes for Applicants](#) published by the Community Plant Variety Office (CPVO). This note aims to answer legal, administrative and financial questions that one may have when requesting Community plant variety rights. Further information is available from [CPVO website](#).

Obligation under the International Convention for the Protection of New Varieties of Plants 1991 (UPOV91)

Consistent with Australia's membership of UPOV 1991, the criteria for the granting of protection under the [Plant Breeder's Rights Act 1994](#) (PBRA) is that the variety: has a breeder; is new, distinct, uniform and stable; has an acceptable name; and that application formalities are completed and relevant fees payed.

Applicants for protection need to be aware of the existence of any other Australian legislation, which could impact on their intended use of the registered variety. Administrators of other Australian legislation may have an interest in applications for registration notified in this journal.

It is feasible for a new variety to be registered under the PBRA, but, as the PBRA co-exists with other laws of the land, the exercise of the breeder's right may be restricted by such legislation. For example, current legislation may prohibit the use of that variety in food, or, the growing of that variety as a noxious weed.

The Plant Breeder's Rights Office (PBRO) advises that it is the responsibility of the applicant and of administrators of legislation to take these matters up directly between the responsible parties and not with the PBRO.

Instructions to Qualified Persons

Instruction to Qualified Persons: Interactive Variety Description System (IVDS) for Preparing Detailed Description for Plant Varieties Journal

For preparing the detailed description, the Plant Breeder's Rights Office (PBRO) has released the Interactive Variety Description System (IVDS) in the Internet (https://pbr-ivds.ipaustralia.plantbreeders.gov.au/pbr_ivds/) for the Qualified Persons (QPs).

In the beginning of April 2005, all QPs have officially been notified of this new system giving them access to IVDS with their individual user name and password. The main purpose of the system is to harmonise variety descriptions at both national and international level and make the PBR application process as smooth and efficient as possible.

The IVDS allows QPs to fill in descriptions on-line by accessing relevant test guidelines and selecting specific characteristics with their various states of expressions from the options provided. The IVDS incorporated all of the approved UPOV test guidelines (and some national equivalents where a UPOV test guideline is not available) into interactive forms with easy to use drop-down menus. QPs can "build" their own additional/special characteristics if they are not available in the guideline. The IVDS also accepts statistical information.

The IVDS emphasises the use of "grouping characteristics" in selecting comparator varieties. Finally, it allows QPs to lodge the completed variety descriptions on-line. There is a minimum typing involved in the process.

The PBRO anticipates that the QPs had the opportunity to familiarise themselves with IVDS during the testing and demonstration phase (August – Dec 2004) and could operate the system comfortably. There are step by step on-screen instructions with examples in each step of IVDS, which will assist the QPs to complete the process smoothly. In addition, PBRO is ready to help QPs, if they encounter any problem. Please send an e-mail to pbr@ipaustralia.gov.au if there is a problem in completing the description using IVDS.

The detailed descriptions are accepted only in the IVDS format.

Also, please note that after finalising the description through IVDS, the QPs will still need to submit the signed hardcopies of the Part 2 documentations in order to complete the application process. Please contact the PBRO (pbr@ipaustralia.gov.au) for further information.

Cover Image \times *Disphyllum* 'Sunburn'

\times *Disphyllum* 'Sunburn' is a new intergeneric hybrid variety to suit Australian landscape for its hardiness and true Aussie "Green and Gold" colour (Cover image PVJ 26.1). This hybrid variety is a result of many years of innovative breeding research by Attila Kapitany to incorporate the desirable characteristics from two completely different genera into one. He hybridised Australian native *Disphyma crassifolium* ssp. *clavellatum* with an African species *Glottiphyllum longum* to create a new nothogenus \times *Disphyllum*. 'Sunburn' is a succulent variety with bright yellow flowers which tolerates cold, drought, humidity, frost, poor water quality and is an ideal plant for groundcover. As an intergeneric hybrid 'Sunburn' is sterile and has no weed potential.

- [Grants Revoked](#)
- [Corrigenda](#)

ACCEPTANCES

The following varieties are under provisional protection from the date of acceptance:

Agonis flexuosa

WILLOW MYRTLE, WILLOW PEPPERMINT

‘Pink Flamingo’

Application No: 2012/303 Accepted: 10/1/2013

Applicant: **Robert Harrison**, Tynong, VIC.

Alstroemeria hybrid

PERUVIAN LILY

‘Zaprikate’

Application No: 2012/283 Accepted: 6/2/2013

Applicant: **Van Zanten Plants B. V.**

Agent: **Ramm Botanicals Trust**, Kangy Angy, NSW.

Anigozanthos hybrid

KANGAROO PAW

‘KLEAC11212’

Application No: 2011/268 Accepted: 22/1/2013

Applicant: **Nils Klemm**.

Agent: **Ian Paananen**, Macmasters Beach, NSW.

‘KLEAC11213’

Application No: 2011/269 Accepted: 22/1/2013

Applicant: **Nils Klemm**.

Agent: **Ian Paananen**, Macmasters Beach, NSW.

‘KLEAC11211’

Application No: 2011/267 Accepted: 22/1/2013

Applicant: **Nils Klemm**.

Agent: **Ian Paananen**, Macmasters Beach, NSW.

‘Rambofling’ syn Bush Fling

Application No: 2013/027 Accepted: 7/3/2013
Applicant: **Ramm Botanicals Holdings Pty Ltd.**
Agent: **Ramm Botanicals Trust**, Kangy Angy, NSW.

‘Rambossion’ syn Bush Passion

Application No: 2013/026 Accepted: 8/3/2013
Applicant: **Ramm Botanicals Holdings Pty Ltd.**
Agent: **Ramm Botanicals Trust**, Kangy Angy, NSW.

‘Rambotasy’

Application No: 2013/025 Accepted: 8/3/2013
Applicant: **Ramm Botanicals Holdings Pty Ltd.**
Agent: **Ramm Botanicals Trust**, Kangy Angy, NSW.

‘Rambotation’ syn Bush Flirtation

Application No: 2013/028 Accepted: 12/3/2013
Applicant: **Ramm Botanicals Holdings Pty Ltd.**
Agent: **Ramm Botanicals Trust**, Kangy Angy, NSW.

Begonia xhiemalis

ELATIOR BEGONIA, WINTER-FLOWERING BEGONIA, BEGONIA-ELATIOR-HYBRIDAE

‘Betulia Candy’

Application No: 2012/285 Accepted: 30/1/2013
Applicant: **Koppe Royalty B.V.**
Agent: **Crop & Nursery Services**, Macmasters Beach, NSW.

Buddleja davidii

BUTTERFLY-BUSH; ORANGE-EYE; SUMMER-LILAC

‘Tobudivory’

Application No: 2013/001 Accepted: 6/2/2013
Applicant: **Thompson & Morgan (UK) Ltd.**
Agent: **Aussie Winners Pty Ltd**, Redland Bay, QLD.

Calibrachoa hybrid

CALIBRACHOA

‘Suncalpi’ syn Bouquet Brilliant Pink

Application No: 2012/293 Accepted: 31/1/2013

Applicant: **Suntory Flowers Ltd.**
Agent: **Oasis Horticulture Pty Limited**, Winmalee, NSW.

‘KLECA10220’

Application No: 2011/270 Accepted: 4/2/2013
Applicant: **Nils Klemm.**
Agent: **Ian Paananen**, Macmasters Beach, NSW.

Callistemon hybrid

BOTTLEBRUSH

‘Ramboglow’ syn All Aglow

Application No: 2012/261 Accepted: 8/1/2013
Applicant: **Ramm Botanicals Holdings Pty Ltd**, NSW.

Carex oshimensis

JAPANESE SEDGE

‘Evergreen’

Application No: 2012/256 Accepted: 10/1/2013
Applicant: **Patrick Fitzgerald.**
Agent: **Sprint Horticulture**, Fountain Plaza, NSW.

Cordyline australis

CORDYLINE, CABBAGE TREE

‘Cha Cha’

Application No: 2012/145 Accepted: 4/2/2013
Applicant: **Peter Fraser.**
Agent: **Touch of Class Plants Pty Ltd**, VIC.

‘Can Can’

Application No: 2012/146 Accepted: 4/2/2013
Applicant: **Peter Fraser.**
Agent: **Touch of Class Plants Pty Ltd**, VIC.

Corymbia citriodora

LEMON SCENTED GUM

‘Babycit’ syn Baby Citro

Application No: 2013/005 Accepted: 15/1/2013

Applicant: **Humphris Family Trust**, Mooroolbark, VIC.

Cucumis melo

MELON

‘Sweet Persia’

Application No: 2012/252 Accepted: 18/2/2013

Applicant: **Ariana Holdings Pty Ltd**, Adelaide, SA.

‘Sunny Persia’

Application No: 2012/253 Accepted: 18/2/2013

Applicant: **Ariana Holdings Pty Ltd**, Adelaide, SA.

Dahlia variabilis

DAHLIA

‘Dream Maker’ syn Future Watch

Application No: 2012/300 Accepted: 9/1/2013

Applicant: **KRW Hammett**.

Agent: **Touch of Class Plants P/L**, Tynong, VIC.

Dianella caerulea

BLUE FLAX-LILY

‘DC3000’

Application No: 2012/195 Accepted: 14/1/2013

Applicant: **David Charlton**, Wandella Via Cobargo, NSW.

Dianella revoluta

SPREADING FLAX-LILY, BLUEBERRY LILY, BLACK-ANTHER FLAX-LILY, BLUE FLAX LILY

‘DR002’

Application No: 2012/196 Accepted: 14/1/2013

Applicant: **David Charlton**, Wandella Via Cobargo, NSW.

‘DR003’

Application No: 2012/197 Accepted: 14/1/2013
Applicant: **David Charlton**, Wandella Via Cobargo, NSW.

Dianella congesta

BLUE FLAX LILY

‘DCT500’

Application No: 2012/171 Accepted: 12/2/2013
Applicant: **Ozbreed Pty Ltd**, Richmond, NSW.

Dianthus allwoodii

PINKS

‘WP11 GWE04’ syn Memories

Application No: 2012/291 Accepted: 5/2/2013
Applicant: **Carolyn Grace Bourne**.
Agent: **Plants Management Australia Pty. Ltd.**, Dodges Ferry, TAS.

Diplotaxis tenuifolia

WILD ROCKET

‘Dragons Tongue’

Application No: 2012/284 Accepted: 9/1/2013
Applicant: **AL Tozer Ltd**.
Agent: **Griffin Seeds Pty Ltd**, Lower Plenty, VIC.

Gaura lindheimeri

GAURA, BUTTERFLY BUSH

‘Harrosy’

Application No: 2013/024 Accepted: 19/2/2013
Applicant: **Hardy's Cottage Garden Plants**.
Agent: **Aussie Winners Pty Ltd**, Redland Bay, QLD.

Glycine max

SOYBEAN

‘Hayman’

Application No: 2013/052 Accepted: 14/3/2013

Applicant: **CSIRO, NSW Department of Primary Industries, GRDC**, Canberra, ACT.

‘Richmond’

Application No: 2013/053 Accepted: 14/3/2013

Applicant: **CSIRO, NSW Department of Primary Industries, GRDC**, Canberra, ACT.

Helleborus orientalis hybrid

WINTER ROSE

‘Cinderella’

Application No: 2012/304 Accepted: 22/1/2013

Applicant: **J.T. Verboom**.

Agent: **Crop and Nursery Services**, Macmasters Beach, NSW.

Hordeum vulgare

BARLEY

‘Flinders’

Application No: 2012/158 Accepted: 14/3/2013

Applicant: **InterGrain Pty Ltd**, Bibra Lake, WA.

Lactuca sativa

LETTUCE

‘MESTIZA’

Application No: 2012/117 Accepted: 29/1/2013

Applicant: **Nunhems B.V.**

Agent: **Shelston IP**, Sydney, NSW.

Lens culinaris

LENTIL

‘PBA Ace’ syn Ace

Application No: 2012/185 Accepted: 15/1/2013

Applicant: **Agriculture Victoria Services Pty Ltd, Grains Research and Development Corporation.**
Agent: **PB Seeds Pty Ltd**, Kalkee, VIC.

‘PBA Bolt’ syn Bolt

Application No: 2012/186 Accepted: 15/1/2013
Applicant: **Agriculture Victoria Services Pty Ltd, Grains Research and Development Corporation.**
Agent: **PB Seeds Pty Ltd**, Kalkee, VIC.

Leptospermum sericeum

SILVER TEA TREE, SWAMP TEA-TREE

‘Littlelep’

Application No: 2012/234 Accepted: 19/2/2013
Applicant: **George A Lullfitz**, Wanneroo, WA.

Liriope muscari

LILYTURF

‘VS001’

Application No: 2012/166 Accepted: 12/2/2013
Applicant: **Ozbreed Pty Ltd**, Richmond, NSW.

‘LIRSS’

Application No: 2012/167 Accepted: 12/3/2013
Applicant: **Vic John Ciccolella.**
Agent: **Ozbreed Pty Ltd**, Richmond, NSW.

Lolium multiflorum var. westerwoldicum

ANNUAL RYEGRASS

‘Hogan’

Application No: 2013/023 Accepted: 8/2/2013
Applicant: **New Zealand Agriseeds Limited.**
Agent: **Heritage Seeds Pty Ltd**, Howlong, NSW.

Lomandra multiflora

CLUB RUSH, MANY HEADED MAT RUSH

‘VER1’

Application No: 2012/169 Accepted: 12/2/2013

Applicant: **Vera Lubicic**.
Agent: **Ozbreed**, Clarendon, NSW.

Lomandra montana

BLUE MOUNTAINS MAT RUSH

'LLM500'

Application No: 2012/170 Accepted: 12/2/2013
Applicant: **Ozbreed Pty Ltd**, Richmond, NSW.

Lomandra hystrix

SPINY HEADED MAT RUSH

'LMS01'

Application No: 2012/168 Accepted: 12/2/2013
Applicant: **Craig Waters**.
Agent: **Ozbreed Pty Ltd**, Richmond, NSW.

Macropidia fuliginosa

BLACK KANGAROO PAW

'Rambonight' syn Midnight

Application No: 2012/296 Accepted: 9/1/2013
Applicant: **Ramm Botanicals Holdings Pty Ltd**.
Agent: **Ramm Botanicals Trust**, Kangy Angy, NSW.

Malus domestica

APPLE

'PremA96'

Application No: 2012/282 Accepted: 1/2/2013
Applicant: **Prevar Ltd**.
Agent: **Australian Nurserymen's Fruit Improvement company (ANFIC) Ltd**, Kallangur, QLD.

Medicago sativa

LUCERNE

'SuperNova' syn Speeda

Application No: 2012/262 Accepted: 22/1/2013
Applicant: **Seed Genetics International**, Unley, SA.

Pandorea jasminoides

BOWER OF BEAUTY

‘Daispanfunk’ syn Funky Bellz

Application No: 2012/177 Accepted: 8/3/2013

Applicant: **Daisy Stewart.**

Agent: **Ramm Botanicals Holdings Pty Ltd**, Kangy Angy, NSW.

Persea americana

AVOCADO

‘PP4’

Application No: 2012/183 Accepted: 25/2/2013

Applicant: **The Regents of the University of California.**

Agent: **Phillip Ormonde Fitzpatrick**, Melbourne, VIC.

‘PP24’

Application No: 2012/182 Accepted: 25/2/2013

Applicant: **The Regents of the University of California.**

Agent: **Phillip Ormonde Fitzpatrick**, Melbourne, VIC.

‘PP44’

Application No: 2012/181 Accepted: 25/2/2013

Applicant: **The Regents of the University of California.**

Agent: **Phillip Ormonde Fitzpatrick**, Melbourne, VIC.

Petunia hybrid

PETUNIA

‘Sunsurfcopaka’ syn Bouquet Red

Application No: 2012/294 Accepted: 1/2/2013

Applicant: **Suntory Flowers Ltd.**

Agent: **Oasis Horticulture Pty Limited**, Winmalee, NSW.

‘Sunsurfpitora’ syn Bouquet Salmon

Application No: 2012/295 Accepted: 1/2/2013

Applicant: **Suntory Flowers Ltd.**

Agent: **Oasis Horticulture Pty Limited**, Winmalee, NSW.

Phaseolus vulgaris

FRENCH BEAN, SNAP BEAN

‘Barron’ syn HMX8121

Application No: 2012/189 Accepted: 1/2/2013

Applicant: **Harris Moran Seed Company.**

Agent: **Clause Pacific (Henderson Seeds Group Pty Ltd Trading as Clause Pacific),** Bulleen, VIC.

‘Wyatt’ syn HMX8122

Application No: 2012/190 Accepted: 1/2/2013

Applicant: **Harris Moran Seed Company.**

Agent: **Clause Pacific (Henderson Seeds Group Pty Ltd Trading as Clause Pacific),** Bulleen, VIC.

Pisum sativum

FIELD PEA

‘SHIRAS’

Application No: 2012/184 Accepted: 6/3/2013

Applicant: **Elsoms Seeds Ltd.**

Agent: **Lefroy Valley,** Seaford, VIC.

Pittosporum tenuifolium

PITTOSPORUM, KOHUHU, TAWHIWHI

‘HI01’ syn Hole in one

Application No: 2012/302 Accepted: 9/1/2013

Applicant: **Robert Harrison,** Tynong, VIC.

Prunus salicina

JAPANESE PLUM

‘MJ 512.01’

Application No: 2012/267 Accepted: 7/1/2013

Applicant: **Western Australian Agriculture Authority,** Bentley, WA.

‘MJ 511.09’

Application No: 2012/268 Accepted: 7/1/2013

Applicant: **Western Australian Agriculture Authority,** Bentley, WA.

‘MJ 511.03’

Application No: 2012/265 Accepted: 7/1/2013
Applicant: **Western Australian Agriculture Authority**, Bentley, WA.

‘MJ 511.10’

Application No: 2012/266 Accepted: 7/1/2013
Applicant: **Western Australian Agriculture Authority**, Bentley, WA.

Prunus subhirtella var pendula

WEEPING HIGAN CHERRY

‘Pink Snow Showers’

Application No: 2012/216 Accepted: 30/1/2013
Applicant: **LCN Holdings, Inc. dba Lake County Nursery**.
Agent: **Fleming's Nurseries**, Monbulk, VIC.

Prunus persica var nucipersica

NECTARINE

‘Pacific Sugarine’

Application No: 2012/013 Accepted: 7/2/2013
Applicant: **Lowell G. Bradford**.
Agent: **Buchanan's Nursery**, Hodgson Vale, QLD.

Prunus armeniaca

APRICOT

‘Lilly Cot’

Application No: 2012/281 Accepted: 15/2/2013
Applicant: **SDR Fruit LLC**.
Agent: **Australian Nurserymen's Fruit Improvements Company (ANFIC) Ltd**, Kallangur, QLD.

‘Magic Cot’

Application No: 2012/280 Accepted: 15/2/2013
Applicant: **SDR Fruit LLC**.
Agent: **Australian Nurserymen's Fruit Improvements Company (ANFIC) Ltd**, Kallangur, QLD.

‘Perle Cot’

Application No: 2012/279 Accepted: 15/2/2013
Applicant: **SDR Fruit LLC**.
Agent: **Australian Nurserymen's Fruit Improvements Company (ANFIC) Ltd**, Kallangur, QLD.

‘Sunny Cot’

Application No: 2012/278 Accepted: 15/2/2013

Applicant: **SDR Fruit LLC.**

Agent: **Australian Nurserymen's Fruit Improvements Company (ANFIC) Ltd**, Kallangur, QLD.

‘Wonder Cot’

Application No: 2012/277 Accepted: 15/2/2013

Applicant: **SDR Fruit LLC.**

Agent: **Australian Nurserymen's Fruit Improvements Company (ANFIC) Ltd**, Kallangur, QLD.

Raphiolepis indica

INDIAN HAWTHORN

‘RAPH02’

Application No: 2011/316 Accepted: 11/2/2013

Applicant: **Vic John Ciccolella.**

Agent: **Ozbreed Pty Ltd**, Richmond, NSW.

Rosa hybrid

ROSE

‘GRA101555’

Application No: 2013/019 Accepted: 15/2/2013

Applicant: **Harry Schreuders.**

Agent: **Grandiflora Nurseries Pty Ltd**, Skye, VIC.

‘GRA101514’

Application No: 2013/020 Accepted: 15/2/2013

Applicant: **Harry Schreuders.**

Agent: **Grandiflora Nurseries Pty Ltd**, Skye, VIC.

‘GRA101547’

Application No: 2013/021 Accepted: 15/2/2013

Applicant: **Harry Schreuders.**

Agent: **Grandiflora Nurseries Pty Ltd**, Skye, VIC.

‘GRA101553’

Application No: 2013/022 Accepted: 6/3/2013

Applicant: **Harry Schreuders.**

Agent: **Grandiflora Nurseries Pty Ltd**, Skye, VIC.

Rubus idaeus

RASPBERRY

‘DrisRaspSeven’

Application No: 2013/009 Accepted: 22/2/2013

Applicant: **Driscoll Strawberry Associates, Inc.**

Agent: **Phillips Ormonde Fitzpatrick**, Melbourne, VIC.

Solanum lycopersicum

TOMATO

‘Solarino’

Application No: 2012/259 Accepted: 4/1/2013

Applicant: **Rijk Zwaan Zaadteelt en Zaadhandel B.V.**

Agent: **Rijk Zwaan Australia Pty Ltd**, Daylesford, VIC.

Solanum tuberosum

POTATO

‘Divaa’

Application No: 2012/297 Accepted: 22/1/2013

Applicant: **Caithness Potatoes Holding BV.**

Agent: **Eastern Seeds Pty Ltd**, Virginia, SA.

‘Marvel’

Application No: 2012/298 Accepted: 22/1/2013

Applicant: **Caithness Potatoes Holding BV.**

Agent: **Eastern Seeds Pty Ltd**, Virginia, SA.

Solanum lycopersicum

TOMATO

‘Kookaburra’

Application No: 2012/276 Accepted: 19/3/2013

Applicant: **Nunhems B.V.**

Agent: **Shelston IP**, Sydney, NSW.

Syzygium australe

LILLY PILLY

‘OTC1’

Application No: 2012/180 Accepted: 4/2/2013

Applicant: **Agbiz Holdings Pty Ltd.**

Agent: **Touch of Class Plants Pty Ltd**, Tynong, VIC.

Torenia hybrid

TORENIA

‘Sunrekodebu’ syn Bouquet Deep Blue

Application No: 2012/290 Accepted: 30/1/2013

Applicant: **Suntory Flowers Ltd.**

Agent: **Oasis Horticulture Pty Limited**, Winmalee, NSW.

‘Sunrekobuho’ syn Bouquet Blue

Application No: 2012/289 Accepted: 30/1/2013

Applicant: **Suntory Flowers Ltd.**

Agent: **Oasis Horticulture Pty Limited**, Winmalee, NSW.

‘Sunrekokuri’ syn Bouquet Cream Yellow

Application No: 2012/286 Accepted: 30/1/2013

Applicant: **Suntory Flowers Ltd.**

Agent: **Oasis Horticulture Pty Limited**, Winmalee, NSW.

‘Sunrekoroho’ syn Bouquet DeepRose

Application No: 2012/288 Accepted: 30/1/2013

Applicant: **Suntory Flowers Ltd.**

Agent: **Oasis Horticulture Pty Limited**, Winmalee, NSW.

Vaccinium hybrid

SOUTHERN Highbush Blueberry

‘EB 8-21’

Application No: 2012/257 Accepted: 10/1/2013

Applicant: **Rolfe Nominees Pty Ltd, Prunus Persica Pty Ltd.**

Agent: **Australian Nurserymen's Fruit Improvement Company (ANFIC) Ltd**, Kallangur, QLD.

‘EB 8-46’

Application No: 2012/260 Accepted: 10/1/2013

Applicant: **Rolfe Nominees Pty Ltd, Prunus Persica Pty Ltd.**

Agent: **Australian Nurserymen's Fruit Improvement Company Limited (ANFIC)**, Kallangur, QLD.

'EB 8-38'

Application No: 2012/258 Accepted: 10/1/2013

Applicant: **Rolfe Nominees Pty Ltd, Prunus Persica Pty Ltd.**

Agent: **Australian Nurserymen's Fruit Improvement Company (ANFIC) Ltd**, Kallangur, QLD.

Viburnum odoratissimum

SWEET VIBURNUM

'VOC1'

Application No: 2013/031 Accepted: 11/2/2013

Applicant: **Jonathon Williams.**

Agent: **Ozbreed Pty Ltd**, Clarendon, NSW.

Vitis vinifera

GRAPE VINE

'IFG Three'

Application No: 2013/029 Accepted: 11/2/2013

Applicant: **International Fruit Genetics LLC**, Mildura, VIC.

'IFG Nine'

Application No: 2013/030 Accepted: 11/2/2013

Applicant: **International Fruit Genetics LLC**, Mildura, VIC.

'Sheegene 17' syn Great Green Seedless

Application No: 2013/044 Accepted: 26/2/2013

Applicant: **Sheehan Genetics LLC.**

Agent: **Sheehan Genetics Australia Pty Ltd**, Emerald, Vic.

Zea mays

CORN, MAIZE

'01DKD2' syn I294213

Application No: 2012/191 Accepted: 25/2/2013

Applicant: **Monsanto Technology LLC.**

Agent: **Monsanto Australia Limited**, Melbourne, VIC.

'01INL1'

Application No: 2012/192 Accepted: 25/2/2013

Applicant: **Monsanto Technology LLC.**

Agent: **Monsanto Australia Limited**, Melbourne, VIC.

'87DUA5' syn 1119135

Application No: 2012/193 Accepted: 25/2/2013

Applicant: **Monsanto Technology LLC.**

Agent: **Monsanto Australia Limited**, Melbourne, VIC.

'C3IZI203'

Application No: 2012/194 Accepted: 25/3/2013

Applicant: **Monsanto Technology LLC.**

Agent: **Monsanto Australia Limited**, Melbourne, VIC.

Variety Descriptions

<u>Common (Genus Species)</u>	<u>Variety</u>	<u>Title Holder</u>
<u>Peruvian Lily</u> <i>(Alstroemeria hybrid)</i>	Zalsaney	Van Zanten Plants B. V.
<u>Peruvian Lily</u> <i>(Alstroemeria hybrid)</i>	Zapriamin	Van Zanten Plants B. V.
<u>Peruvian Lily</u> <i>(Alstroemeria hybrid)</i>	Zalsatal	Van Zanten Plants B. V.
<u>Peruvian Lily</u> <i>(Alstroemeria hybrid)</i>	Zapriari	Van Zanten Plants B. V.

Details of Application

Application Number	2012/215
Variety Name	'Hytas'
Genus Species	<i>Trifolium hybridum</i>
Common Name	Alsike clover
Synonym	
Accepted Date	23 Oct2012
Applicant	University of Tasmania, Hobart, TAS The Crown in Right of the State of Tasmania through the Department of Primary Industries, Parks, Water and Environment, Launceston, TAS
Agent	
Qualified Person	Andrea Hurst

Details of Comparative Trial

Location	Mt Pleasant Laboratories, Launceston, TAS.
Descriptor	National Descriptor for Alsike clover (PBR ALSI)
Period	March 2012 to December 2012
Conditions	Seed was germinated on pads in 26 March 2012 and pricked into 64 cell Yates Rite-Gro Kwik trays and grown in glasshouse conditions under natural light. The seedlings were transplanted into 200mm pots in a pine bark/loam based potting mix with premixed slow release fertiliser and transferred to an outside trial site under overhead irrigation. Plants were given soluble fertiliser as required. Snail bait was applied at regular intervals. Weeds were controlled by hand.
Trial Design	Randomised block, 4 treatments, 6 replicates, 12 plants per plot.
Measurements	Seventy-two plants of each variety were grown and measured.

Origin and Breeding

Recurrent phenotypic selection: 'CPI 248524'. Four cycles of recurrent phenotypic selection for seedling vigour, plant vigour, uniform time of flowering, length of longest flowering stem, high number of flowering stems within 'CPI 24852'. Introduced to Australia in 1958 as seed from the Swedish Seed Association, Uppsala, Sweden. The original germplasm was collected by Professor C. L. Behm from Erzurum Ziraat Murdurlugunde, Turkey, 1955. 'CPI 24852' is held by the Department of Primary Industries, Water and Environment, Launceston Tasmania as accession Tas 2541. In 2002 20 plants of 'CPI 24852' were grown on weed mat at Mt Pleasant, Launceston. In January 2005 seed was harvested from the surviving plants. Seed germinated in May 2006 and 64 plants grown. 7 vigorous plants were selected with tall flowering stems, high numbers of flowering stems and backcrossed with 3 plants of 'CPI 24852' with these same desired characteristics and uniform time of flowering. Seed collected and 128 plants grown in 2007. Seed harvested from 10 plants selected for vigour, tall flowering stems, high number of flowering stems and uniform time of flowering. In 2008 128 plants grown. 40 plants selected for seedling vigour, tall flowering stems, high number of flowering stems and uniform time of flowering and crossed in isolation. Mode of propagation: seed.

Choice of Comparators Characteristics used for grouping varieties to identify the most similar Variety of Common Knowledge

Organ/Plant Part	Context	State of Expression in Group of Varieties
Plant	habit in flowering	semi-erect
Plant	winter activity	high
Stem	length	long

Most Similar Varieties of Common Knowledge identified (VCK)

Name	Comments
'CPI 24852'	parent

Varieties of Common Knowledge identified and subsequently excluded

Variety	Distinguishing Characteristics	State of Expression in Candidate Variety	State of Expression in Comparator Variety	Comments
'Dawn'	Plant habit in flowering	semi-erect	prostrate	
'Dawn'	Plant winter activity	high	medium	

Variety Description and Distinctness - Characteristics which distinguish the candidate from one or more of the comparators are marked with a tick.

Organ/Plant Part: Context	'Hytas'	'CPI 24852'
<input type="checkbox"/> Plant: habit in flowering	semi-erect	semi-erect
<input type="checkbox"/> Plant: winter activity	high	high
<input type="checkbox"/> Stem: length	long	long
<input checked="" type="checkbox"/> Stem: density	high	medium
<input checked="" type="checkbox"/> Leaf: width of medial leaflet	medium	narrow
<input type="checkbox"/> Plant: number of inflorescences on the longest stem	high	high
<input type="checkbox"/> Plant: time of flowering	medium	medium

Description: **Andrea Hurst and Eric Hall**, Launceston, TAS.

Details of Application

Application Number	2006/043
Variety Name	'Alvina'
Genus Species	<i>Malus domestica</i>
Coon Name	Apple
Synonym	
Accepted Date	29 Apr 2006
Applicant	G E & E Fankhauser, Druin, VIC.
Agent	Tahune Fields Nursery, Lucaston, TAS.
Qualified Person	Gordon Brown

Details of Comparative Trial

Location	Drouin, VIC
Descriptor	Apple (<i>Malus domestica</i>) UPOV TG/14/9
Period	Harvest seasons 2012 and 2013
Conditions	Site is irrigated and under hail netting. It is enclosed in a commercial apple orchard and receives the same nutrition and spray program as the surrounding orchard.
Trial Design	Completely Random Design (CRD)
Measurements	All UPOV apple MALUS-DOM characters
RHS Chart - edition	2007

Origin and Breeding

Spontaneous mutation or sport: 'Royal Gala' 'Alvina' was discovered as a whole tree mutation in 2000 in an orchard of 'Royal Gala' planted in 1997. In 2002, following 2 season observations, 100 trees were grafted in the orchard using scions from the original tree. In 2005, fruiting assessments on these trees proved the characters were true to type. Breeder: Glynn Fankhauser.

Choice of Comparators Characteristics used for grouping varieties to identify the most similar Variety of Common Knowledge

Organ/Plant Part	Context	State of Expression in Group of Varieties
Tree	type	ramified
Tree	time of beginning of flowering	early to medium
Fruit	size	medium to large
Fruit	size of lenticels	large
Fruit	are of russet around eye basin	absent or small
Fruit	firmness of flesh	firm to very firm

Most Similar Varieties of Common Knowledge identified (VCK)

Details of Application

Application Number	2010/277
Variety Name	'Hortberry1'
Genus Species	<i>Rubus occidentalis</i>
Common Name	Black Raspberry
Synonym	Nil
Accepted Date	10 Feb 2011
Applicant	The New Zealand Institute for Plant and Food Research Limited, Mt Albert, Auckland, NZ
Agent	AJ Park, Marcus Clarke Street, ACT
Qualified Person	Joseph Stephens

Details of Comparative Trial

Overseas Testing Authority	New Zealand Plant Variety Rights Office
Overseas Data Reference Number	2825
Location	Motueka, New Zealand, Latitude 41°058 S, Longitude 172°584E
Descriptor Period	UPOV TG/43/7 2008/09
Conditions	Warm temperate climate
Trial Design	Randomised complete block
Measurements	In accordance with UPOV technical guideline
RHS Chart - edition	1966

Origin and Breeding

Controlled pollination: The new variety of black raspberry, *Rubus occidentalis*, was developed in the course of a planned breeding programme. The parents used to make the cross were unreleased selections 88455N-2 (seed parent) and 88407RTN11 (pollen parent). The new variety was selected in the 2004-2006 fruiting seasons from amongst a population of seedlings and given the breeder code HC6. The new variety has since been named 'Hortberry1'. Breeder: The Horticulture and Food Research Institute of New Zealand Ltd.

Details of Application

Application Number	2011/229
Variety Name	'Rocio'
Genus Species	<i>Vaccinium corymbosum</i>
Common Name	Blueberry
Synonym	Nil
Accepted Date	03 Feb 2012
Applicant	Royal Berries, S.L., Almonte, Huelva, Spain
Agent	Davies Collison Cave, Melbourne, VIC
Qualified Person	Margaret Zorin

Details of Comparative Trial

Overseas Testing Authority	US Patent and Trademark Office (USPTO)
Overseas Data Reference Number	PP20374
Location	Greenwood, Florida USA and Almonte, Huelva, Spain
Descriptor	Blueberry (<i>Vaccinium</i> spp.) TG/137/4
Period	1997-2008
Conditions	Plants were asexually propagated from a single seedling as cuttings in 2001 at Almonte, Huelva Spain. Rooted cuttings were planted in the field and were assessed in March-April 2008 when approximately five years old.
Trial Design	Plants of 'Rocio' have been compared to all other Blueberry varieties known including 'Sharpblue' 'Misty' and 'Biloxi' (all unpatented and 'Windsor' (PP 12783) and 'Star' (PP10675).
Measurements	All observations and measurements are according to UPOV guidelines and were taken on five-year old plants at Almonte, Huelva, Spain in March-April 2008. Colours herein described are according to the Royal Horticultural Society Colour Chart.
RHS Chart - edition	2001

Origin and Breeding

Controlled pollination: 'Rocio' is the product of a controlled cross between FL96-24 and FL95-3 in Greenwood, Florida USA. The resulting seed line was selected in Almonte, Huelva, Spain for further selection. The seedling has been vegetatively propagated by rooted cuttings and invitro for several generations and has shown to reproduce true-to-type and has been named 'Rocio'. Breeders: Antonia Abad Alamo and Jose Ulf Hayler Lopez of Huelva, Spain and Paul M Lyrene of Gainesville, Florida, USA.

Details of Comparative Trial

Overseas Testing	US Patent & Trademark Office (USPTO)
Authority	
Overseas Data	PP20373
Reference Number	
Location	Greenwood, Florida USA and Almonte, Huelva, Spain
Descriptor	Blueberry (<i>Vaccinium</i> spp) TG/137/3
Period	1996-2001
Conditions	Plants were asexually propagated as cuttings in 2005 and planted in field under standard blueberry production conditions in Almonte, Huelva, Spain and were assessed in 2008.
Trial Design	The new variety 'Romero' was compared to other blueberry varieties 'Sharpblue' 'GulfCoast' 'Misty' and 'O'Neal' and male parent 'Star' (PP10675).
Measurements	The description is primarily based on observations and measurements taken in March-April 2008 of approximately five-year old plants using UPOV criteria. Colours described here in are from the Royal Horticultural Society Colour Chart.
RHS Chart - edition	2001

Origin and Breeding

Controlled crosspollination: 'Romeo' is the product of controlled cross between 'FL95-3' (un-patented seed parent) x the pollen parent 'Star' (US PP10675), which was further selected for a single plant. 'Romeo' is distinct from its ancestors and all Blueberry varieties known to its originators. The variety has proved to be stable in successive generations of vegetative reproduction. Breeders: Antonio Abad Alamo and Jose Ulf Hayler Lopez of Huelva, Spain and Paul M Lyrene from Gainesville, Florida USA.

Choice of Comparators Characteristics used for grouping varieties to identify the most similar Variety of Common Knowledge

Details of Application

Application Number	2011/288
Variety Name	'Suncalho'
Genus Species	<i>Calibrachoa</i> hybrid
Common Name	Calibrachoa
Synonym	Nil
Accepted Date	04 April 2013
Applicant	Suntory Flowers Limited, Tokyo, Japan
Agent	Oasis Horticulture Pty Limited, Winmalee, NSW
Qualified Person	Ian Paananen

Details of Comparative Trial

Overseas Testing Authority	U. S. Patent and Trade Mark Office
Overseas Data Reference Number	PP21,810
Location	Winmalee, NSW
Descriptor	Calibrachoa (<i>Calibrachoa</i>) TG/207/1
Period	September - November 2012
Conditions	Overseas data was verified in Australia by local observations at Winmalee, NSW in open beds, stock planted into 140mm pots. Trial of the candidate was conducted with typical commercial conditions prior to assessment. Comparisons of characteristics are based on USPTO descriptions, which were assessed under conditions of controlled environment at Shiga, Japan.
Trial Design	Fifteen pots of each variety arranged in a completely randomised design
Measurements	From ten plants at random. One sample per plant.
RHS Chart - edition	2007

Origin and Breeding

Controlled pollination: seed parent '2666-1' x pollen parent '3135-2' in 2006. The seed parent is characterised by a medium flower diameter and a light pink flower colour. The pollen parent is characterised by a vivid pink flower colour, medium flower diameter and a trailing plant growth habit. Selection criteria: mounding growth habit, abundant branching, large flower size, white flower colour. Propagation: vegetative cuttings and micropropagation were found to be uniform and stable. Breeder: Theo Ruys, Leimuiderbrug, The Netherlands.

Details of Application

Application Number	2011/305
Variety Name	'Little Bride'
Genus Species	<i>Ricinocarpos cyanescens</i>
Common Name	Coastal Wedding Bush
Synonym	Nil
Accepted Date	30 May 2012
Applicant	George A Lullfitz, Wanneroo, WA
Qualified Person	Peter Abell

Details of Comparative Trial

Location	Caporn street Wanneroo, WA
Descriptor	General Descriptor (for plant varieties with no descriptor available)
Period	August 2011 to November 2012
Conditions	Potted into 150mm containers and placed under overhead irrigation. The plants were rowed and blocked in full sun with limited influence from the surrounding environment. A single application of CRF fertiliser at potting lasted the trial period. The weather was within what is typical for the region during the trial.
Trial Design	Plants were potted and placed into single rows of candidate in one row with the comparator beside. There were 15 plants of each variety.
Measurements	The data taken reflects the characteristics of the candidate variety and how it differs from the most similar VCK.
RHS Chart - edition	2007

Origin and Breeding

Selection: September 2006, selections of atypical low growing form from within a population of the species near Esperance WA. Cuttings were taken from selection (generation 1). March 2007, further testing based on the initial propagation and production responses and the variety was repropagated. (generation 2). April 2007, plants potted and evaluated for habit and agronomic traits. April 2008, final assessment done. Cuttings taken (generation 3) and planted into the field for comparison purposes and establishment of mother-stock. June 2010, propagation from mother-stock (generation 4). April and September 2011 - repropagation (generation 5 and 6). During testing and propagation the variety has remained stable and exhibited the characters that it was selected for. No off types have been observed. Breeder: George A. Lullfitz, Wanneroo, WA.

Common Name	Common Vetch
Synonym	
Accepted Date	22 Oct 2012
Applicant	Minister of Agriculture and Fisheries as represented by SARDI, Adelaide, SA
Agent	
Qualified Person	Rade Matic

Details of Comparative Trial

Location	Charlick Research Centre, SA
Descriptor	Common Vetch (<i>Vicia sativa</i>) UPOV TG 32/6
Period	June-November, 2012
Conditions	Trial conducted in the field, sown on 14 June 2012, without inoculations and fertiliser; broad leaf weeds controlled by Diuron 900DF 680g/ha. Insecticides were used at the 6 leaf stage for red legged earth mite control. Grass herbicides were used in 8-10 node of crop to control rye grass, brome grass and voluntary cereal plants. Herbicides and insecticides applied as required.
Trial Design	Plots sown in randomised complete blocks; 10m x 1.25m by 4 replications.
Measurements	Taken from 15 and 50 specimen per variety at random from approximately 200 plants. Each sample is taken from individual plant.

Origin and Breeding

Controlled pollination: 'Blanchefleur BF' x 'Morava'. 'Volga' (evaluated as SA-34823) was developed by making crosses in SARDI's glass-house 1998. F1 planted at SARDI's terraces and selected F2 plant re-crossed by 'Morava' in 2000. The female parent 'Blanchefleur' a well adopted in Southern Australian cropping rotations, characterised by a unique red cotyledons, high toxin levels in the grain (>1.2%), mid maturing, white flower and very susceptible to rust disease. The pollen parent, Morava is characterised by dark green leaves, beige cotyledons, later maturing, low in grain toxin. Breeder: Rade Matic, SARDI, SA.

Trial Design	Plots sown in randomised complete blocks; 10m x 1.25m by 4 replications.
Measurements	Taken from 15 and 50 specimens per variety at random from approximately 200 plants. Each sample is taken from individual plant.

Origin and Breeding

Controlled pollination: 'Blanchefleur' (ATC-60394) x 'ATC-60217' (spanish landrace) Timok (evaluated as SA-35103) was developed by crossing the parents in SARDI's glass-house 2000. F1 planted at SARDI's terraces and selected F2 plant re-crossed by ATC-60217 in 2002. The female parent Blanchefleur a well adopted in Southern Australian cropping rotations, characterised by a unique red cotyledons, high toxin levels in the grain (>1.2%), mid maturing and very susceptible to rust disease. The pollen parent, ATC-60217 is characterised by dark green leaves, long internodes, beige cotyledons, later maturing, low in grain toxin (0.58%), and very resistant to rust disease. Both parental variety/line were included in DUS trail. F2 and F3 generations included in single selected rows in Charlick. The pedigree method of selection was practised from F2-F6 generations for targeting traits. F6 generation was replicated in SA at five sites. As a advanced line in F8 & F9 were tested in SA, Vic, NSW and WA for 2yrs. Selection criteria of yield (grain and dry matter), earlier maturity, cotyledons colour, rust, ascochyta and Botrytis resistance were observed from F2-F9. Breeder: Rade Matic.

Overseas Data Reference Number	ERW1050
Location	Wageningen, The Netherlands
Descriptor	UPOVTG/7/10
Period	2009 - 2010
Conditions	'Shiras' was compared with 'Desiree' in two field trials planted on 24 April 2009 and 29 April 2010 at Naktuinbouw, Roelofarendsveen, The Netherlands.
Trial Design	Two replicates of 100 plants per variety
Measurements	Records were taken of plant, flower, pod and seed characteristics. No off types were observed in these trials.
RHS Chart - edition	n/a

Origin and Breeding

Selection from "source" material: The maternal parent, 'Kennedy' was pollinated by an un-named variety in October 2000 at Elsoms Seeds Plant Breeding Station in Spalding, Lincolnshire, UK. The variety 'Shiras' was selected after 12 cycles of inbreeding with selection pressure for plant height, yield and purple pod colour. Breeder: Susan Kennedy, Lincolnshire, UK.

Overseas Data	CPVO decision 13582
Reference Number	
Location	Verification trial conducted in Rochedale, Brisbane, QLD. Comparator data has been extracted from the CPVO test report (decision no: 21094).
Descriptor	CPVO-TP/86/1
Period	October 2011 - December 2012
Conditions	Commercial production greenhouse, in 140mm standard pots. Plant protection sprays applied as required.
Trial Design	Plants taken from commercial production at random
Measurements	Measurements taken to confirm overseas test data
RHS Chart - edition	2001

Origin and Breeding

Spontaneous mutation: The new variety 'Anthefaqyr' originated from a spontaneous mutation from proprietary breeding line 95-634-01. Selection occurred in September 1999 in Bleiswijk followed by propagation by tissue culture. The breeder is Jan van Dijk.

Choice of Comparators Characteristics used for grouping varieties to identify the most similar Variety of Common Knowledge

Details of Application

Application Number	2012/188
Variety Name	'Bowie'
Genus Species	<i>Phaseolus vulgaris</i>
Common Name	French bean
Synonym	HMX7118
Accepted Date	21 Nov 2012
Applicant	Harris Moran Seed Company, Modesto, CA, USA
Agent	Clause Pacific (Henderson Seeds Group Pty Ltd Trading as Clause Pacific), Lower Templestowe, VIC
Qualified Person	Peter O'Connell

Details of Comparative Trial

Location	Lower Templestowe, VIC, Australia.
Descriptor	French Bean (new) (<i>Phaseolus vulgaris</i>) TG/12/9 (Rev)
Period	November 2012 - January 2013
Conditions	Summer, mostly fine and mild but some very hot weather at times. Drip irrigation with 20cm emitter spacing. Alluvial loam river flat soils.
Trial Design	Randomised 2 replicated plots per variety sown at 50 plants/sqm. Plant spacing was 5cm.
Measurements	Measurements were taken from 10 randomly selected beans per replicate, 20 in total.
RHS Chart - edition	Nil

Origin and Breeding

Controlled pollination: Garden bean cultivar H37118 has superior characteristics and was developed from an initial cross that was made in San Juan Bautista (SJB), California, in a greenhouse, in the spring of 2000. The cross was between two proprietary lines under stake numbers M6585 (female) and M6899 (male). The F1 generation was harvested in August 2001 at SJB, California, in plot M7X0409. The F2 selection was made in July 2002 near Coloma, Wisconsin, in plot H26875. The F3 selection was made in February 2003 near Los Mochis, Mexico, in plot M30945. The F4 selection was made in July 2003 near Coloma, Wisconsin, in plot H302867. The F5 selection was made in February 2004 near Los Mochis, Mexico, in plot M40043. The F6 selection was made in July 2004 near Coloma, Wisconsin, in plot H408866. The F7 generation was bulked February 2005 near Los Mochis, Mexico, in plot M51941. The F8 generation was bulk harvested August 2005 in SJB, California, in plot C507052. The F9 generation was bulk harvested August 2006 in SJB, California, in plot C604122. The F10 generation was bulked February 2007 near Los Mochis, Mexico, in plot M74601-620. The line was subsequently designated H37118. Breeder Harris Moran Seed Company, Modesto, CA, USA.

Details of Application

Application Number	2012/189
Variety Name	'Barron'
Genus Species	<i>Phaseolus vulgaris</i>
Common Name	French bean
Synonym	HMX8121
Accepted Date	1 Feb 2013
Applicant	Harris Moran Seed Company, Modesto, CA, USA
Agent	Clause Pacific (Henderson Seeds Group Pty Ltd Trading as Clause Pacific), Lower Templestowe, VIC
Qualified Person	Peter O'Connell

Details of Comparative Trial

Location	Lower Templestowe, VIC, Australia.
Descriptor	French Bean (new) (<i>Phaseolus vulgaris</i>) TG/12/9 (Rev)
Period	November 2012 - January 2013
Conditions	Summer, mostly fine and mild but some very hot weather at times. Drip irrigation with 20cm emitter spacing. Alluvial loam river flat soils.
Trial Design	Randomised 2 replicated plots per variety sown at 50 plants/sqm. Plant spacing was 5cm.
Measurements	Measurements were taken from 10 randomly selected beans per replicate, 20 in total.
RHS Chart - edition	Nil

Origin and Breeding

Controlled pollination: Garden bean cultivar H28121 has superior characteristics and was developed from an initial cross that was made in Sun Prairie, Wisconsin, in a greenhouse, in the fall. In the first year of development, the cross was made between two proprietary lines under stake numbers W8654 (female) and W8660 (male), the F1 generation was harvested in April 2004 in the greenhouse located in Sun Prairie, Wisconsin, in plot W4090-1, and the F2 selection was made in July 2004 near Coloma, Wisconsin, in plot H407463. In the second year, the F3 selection was made in February 2005, near Los Mochis, Mexico, in plot M51413 and the F4 selection was made in July 2005 near Coloma, Wisconsin, in plot H504155. In the third year, the F5 selection was made in February 2006 near Los Mochis, Mexico, in plot M60392 and the F6 selection was made in July 2006 near Coloma, Wisconsin, in plot H605415. In the fourth year, the F7 generation was bulked in February 2007 near Los Mochis, Mexico, in plot M72629 and the F8 generation was bulk harvested in August 2007 in Salinas, California, in plot C707389. In the fifth year, the F9 generation was bulked in February 2008, near Los Mochis, Mexico, in plot M84401-496. The line was subsequently designated H28121. Breeder Harris Moran Seed Company, Modesto, CA, USA.

Prior Applications and Sales

Prior application nil. First sold in the USA in Dec 2010 and in Australia in Aug 2012.

Description: **Peter O'Connell**, Valencia Ecosystems Pty Ltd, South Turramurra, NSW.

Details of Application

Application Number	2010/230
Variety Name	'GT20'
Genus Species	<i>Gazania</i> hybrid
Common Name	Gazania
Synonym	Nil
Accepted Date	15 Dec 2010
Applicant	NuFlora International Pty Ltd, Macquarie Fields, NSW
Agent	Ozbreed Pty Ltd, Clarendon, NSW
Qualified Person	Peter Abell

Details of Comparative Trial

Location	Ozbreed, Cupitts Lane, Clarendon, NSW
Descriptor	National Descriptor for Gazania (PBR GAZA)
Period	August 2012 to January 2013
Conditions	Open nursery area with automatic overhead irrigation. Climatic conditions typical for the area near Windsor for the summer to winter period of the trial. Plants were potted into 200mm standard pots and fertilised with a single top dressing of controlled release fertiliser which lasted for the period of the trial.
Trial Design	Two blocks each containing 15 plants of each of the candidate, nearest variety of common knowledge (VCK). All plants were reproduced from cuttings.
Measurements	The data taken reflects the characteristics of the candidate variety and how it differs from the most similar VCK.
RHS Chart - edition	2007

Origin and Breeding

Open pollination: In 2006 a chance seedling was discovered at the Plant Breeding Institute, Cobbitty NSW following breeding populations to produce double flowering Gazania cultivars. The parental population is fertile while the resulting seedling is sterile. From 2006 to 2008 the chance seedling was grown to maturity and selected due to its prolific double flowers, compact habit and sterility. From 2008 to present the chance seedling was found to grow uniform and 3 successive cycles of vegetative propagation have proven to be true to type. The plant was given the name 'GT20'. Breeder, NuFlora International Pty Ltd.

Details of Comparative Trial

Overseas Testing	Community Plant Variety Office (CPVO)
Authority	
Overseas Data	SLA02941
Reference Number	
Location	Naktuinbouw, The Netherlands
Descriptor	Lettuce (<i>Lactuca sativa</i>) TG/13/3
Period	2011
RHS Chart - edition	N/A

Origin and Breeding

Controlled pollination: Resulting from a cross between the female parent, Nunhems breeding line 71981233, and the male parent, Nunhems breeding line 71979338, a number of F1 plants were self pollinated. From the second to the fifth generation pedigree selection was performed. From the sixth to the seventh generation line selection was performed. Selection characters were: leaf anthocyanin colouration - absent; head degree of overlapping of upper part of leaves - weak; head density - loose to medium. Breeder: Nunhem's B.V. breeding team.

Common Name	Lettuce
Synonym	Nil
Accepted Date	23 Nov 2011
Applicant	Nunhems B.V., Haelen, The Netherlands
Agent	Shelston IP, Sydney, NSW
Qualified Person	John Oates

Details of Comparative Trial

Overseas Testing	Community Plant Variety Office (CPVO)
Authority	
Overseas Data	SLA02879
Reference Number	
Location	Naktuinbouw, Roelofarendsveen, The Netherlands
Descriptor	Lettuce (<i>Lactuca sativa</i>) TG/13/3
Period	2011-2012
RHS Chart - edition	N/A

Origin and Breeding

Controlled Pollination: The female parent, a free variety 'Winterhaven', was pollinated by the Nunhems breeding line '71991099' at the Nunhems B.V. breeding station at 'S-Granzande'. A number of the resultant F1 plants were self-pollinated. From the second to the sixth generation pedigree selection was performed. From the seventh to the eighth generation line selection was performed. The selection procedures were conducted at the Nunhems B.V. breeding station at Murcia, Spain. Selection criteria: head shape and size; resistance to Downy Mildew. Breeder: Nunhems B.V. breeding team

Prior Applications and Sales

Country	Year	Current Status	Name Applied
EU	2010	Granted	'Vanguardia'

First sold in Spain in August 2010 and in Australia in February 20110

Description: **John Oates**, Tura Beach, NSW.

Details of Application

Application Number	2012/174
Variety Name	'Vintage-Crop'
Genus Species	<i>Lactuca sativa</i>
Common Name	Lettuce
Synonym	Nil
Accepted Date	08 Nov 2012
Applicant	Vilmorin, La Menitre, France
Agent	Clause Pacific, Lower Templestowe, VIC
Qualified Person	Peter O'Connell

Details of Comparative Trial

Location	Lower Templestowe, VIC, Australia.
Descriptor	Lettuce (<i>Lactuca sativa</i>) UPOV TG/13/10/(Rev)
Period	November 2012 - January 2013
Conditions	Summer, mostly fine and mild but some very hot weather at times. Drip irrigation with 20cm emitter spacing. Alluvial loam river flat soils.
Trial Design	Randomised 2 replicated plots per variety sown at 9 plants/sqm, in 3 rows per bed. Plant spacing was 35cm staggered between rows.
Measurements	All visual observations were taken in accordance with the UPOV technical guideline. Metric measurements were not necessary.
RHS Chart - edition	2005

Origin and Breeding

Controlled pollination: A cross was made in 2003 between the two parents, 23064 and 3/15801. 23064 is a large frame iceberg type with resistance to *Bremia lactucae* (BL) 1-23/25. 3/15801 is a bright green iceberg with resistance to BL-1-24. Screening in field trials was conducted in the Netherlands during spring 2004, spring 2005 and winter 2006. Blind generation (selfing without screening) occurred at the Vilmorin breeding station in La Menitre during spring 2006. Screening in the Vilmorin laboratory for *Bremia* and *Nasonovia* resistance occurred in 2004, 2005 and 2006. Breeder: Vilmorin, La Menitre, France.

Description: **Peter O’Connell**, Valencia Ecosystems Pty Ltd, South Turrumurra, NSW.

Details of Application

Application Number	2011/291
Variety Name	'Sunparavel'
Genus Species	<i>Mandevilla</i> hybrid
Common Name	Mandevilla
Synonym	Classic Red Velvet
Accepted Date	04 April 2013
Applicant	Suntory Flowers Ltd, Tokyo, Japan
Agent	Oasis Horticulture Pty Limited, Winmalee, NSW
Qualified Person	Ian Paananen

Details of Comparative Trial

Overseas Testing Authority	U. S. Patent and Trade Mark Office
Overseas Data Reference Number	PP19,407
Location	Winmalee, NSW
Descriptor	Mandevilla (<i>Mandevilla</i>) PBR MAND.
Period	September - November 2012
Conditions	Overseas data was verified in Australia by local observations at Winmalee, NSW in open beds, stock planted into 200mm pots. Trial of the candidate was conducted with typical commercial conditions prior to assessment. Comparisons of characteristics are based on USPTO descriptions, which were assessed under conditions of controlled environment at Shiga, Japan.
Trial Design	Fifteen pots of each variety arranged in a completely randomised design
Measurements	From ten plants at random. One sample per plant.
RHS Chart - edition	2007

Origin and Breeding

Spontaneous mutation: 'Sunmandecrim' in 2003. The parent is characterised by a red flower colour which fades with age, medium-broad flower diameter and short-medium leaf length. Selection criteria: compact growth habit, small glossy leaves, free branching and flowering, attractive red flower colour. Propagation: vegetative cuttings and micropropagation were found to be uniform and stable. Breeders: Theo Ruys, Leimuiderbrug, The Netherlands.

Variety Name	'Ginger'
Genus Species	<i>Mandevilla</i> hybrid
Common Name	Mandevilla
Synonym	Aloha Bright Pink
Accepted Date	02 Jul 2009
Applicant	Protected Plant Promotions Australia Pty Ltd, Macquarie Fields, NSW and Floraquest Pty Ltd, Pennant Hills, NSW
Agent	Ramm Botanicals Pty Ltd, Kangy Angy NSW
Qualified Person	Megan Bartley

Details of Comparative Trial

Location	Kangy Angy, NSW
Descriptor	Mandevilla (<i>Mandevilla</i>) UPOV TG/MANDE (proj:4)
Period	August 2012 - February 2013
Conditions	Rooted cuttings of both the candidate and the comparator were potted into 140mm standard black plastic pots. 5g of Osmocote Exact standard was added to the surface of the pot at planting. Potting mix was a general-purpose type based on composted pine bark pH 5.9. No supplementary fertiliser was used. Overhead watering was used as necessary. Routine pest and disease sprays were carried out. The plants were grown outdoors in the open. Very hot conditions were experienced during December and January. No significant pest or disease was encountered during the trial.
Trial Design	15 plants each of the candidate and comparators were arranged in a randomised manner.
Measurements	Observations were taken from 10 randomly selected plants.
RHS Chart - edition	1995

Origin and Breeding

Controlled pollination: The breeding work was carried out by Graham Brown as part of a Mandevilla breeding program conducted at Macquarie Fields, NSW. The new plant originated from a cross pollination of proprietary selection X02.5 as the seed parent with Mandevilla hybrida 'Sunmandecrim' as the pollen parent. Selection was made on the compact shrub like growth habit; strong stems and numerous and attractive flowers. Breeder: Graham Brown, Pennant Hills, NSW.

Choice of Comparators Characteristics used for grouping varieties to identify the most similar Variety of Common Knowledge

Organ/Plant Part	Context	State of Expression in Group of Varieties
Stem	length of internodes	short
Leaf blade	bulging between the veins	absent or very weak
Corolla	diameter	medium
Corolla lobe	main colour of upper side	pink

Most Similar Varieties of Common Knowledge identified (VCK)

Name	Comments
'Sunmandetomi'	'Sunmandetomi' is a similar shade of pink and has a similar growth habit.

Varieties of Common Knowledge identified and subsequently excluded

Variety	Distinguishing Characteristics	State of Expression in Candidate Variety	State of Expression in Comparator Variety	Comments	
'Sunmandecrim'	corolla lobe	main colour of upper side	pink	red	'Sunmandecrim' was listed as a comparator but was eliminated due to the clear difference in flower colour.
'Sunparaprero'	pedicel	anthocyanin colouration	absent	strong	'Sunparaprero' also differs from Ginger in plant growth habit and susceptibility to phytophthora.
'Fisrix Pinka'	leaf blade	glossiness of upper side	strong	weak	'Fisrix Pinka' has quite different breeding to Ginger.

Variety Description and Distinctness - Characteristics which distinguish the candidate from one or more of the comparators are marked with a tick.

First sold in Australia in Oct 2007.

Description: **Megan Bartley**, Ramm Botanicals Pty Ltd, Kangy Angy NSW

Details of Application

Application Number	2012/013
Variety Name	'Pacific Sugarine'
Genus Species	<i>Prunus persica</i> var <i>nucipersica</i>
Common Name	Nectarine
Synonym	Nil
Accepted Date	7 Feb 2013
Applicant	Lowell G. Bradford, Le Grand, California, USA
Agent	Buchanan's Nursery, Hodgsonvale, QLD
Qualified Person	Peter Buchanan

Details of Comparative Trial

Overseas Testing Authority	U.S. Patent and Trademark Office (USPTO)
Overseas Data Reference Number	US PP 17,206
Location	262 Breydon Rd, Hodgsonvale, Queensland
Descriptor	Peach/Nectarine (<i>Prunus persica</i>) TG/53/7
Period	2 years
Conditions	The trial was conducted under normal growing conditions for Hodgsonvale, Queensland. Sufficient winter chill as observed and average summer temperatures for the area. There was some dry conditions experienced and supplemental irrigation was used. All standard orchard practice and maintenance was used for the length of the trial and will continue.
Trial Design	10 trees of the candidate variety were planted at a spacing of 2.5 metres between trees and 5 metres between tree rows. The comparator was also planted on the same tree number and spacings.
Measurements	Observations of the tree, fruit and flower characteristics were made to confirm that the variety is the same description in the US PP 18,703. Upon completion of the observations the variety matched the supplied description in all ways.
RHS Chart - edition	N/A

Origin and Breeding

Open pollination: The new variety was planted in 1998 as an open pollinated seed of an unnamed white fleshed nectarine tree. Grown as a seedling on its own roots in a green house at Bradford Farms. It was then transplanted to a cultivated area of the experimental orchard at Bradford Farms. The unnamed seed parent was a first generation cross of 'Spring Bright' yellow fleshed nectarine and an unnamed white fleshed nectarine. Subsequent to origination the new variety was asexually reproduced by budding and grafting and such reproduction of plant and fruit characteristics were true to the original in all respects. Breeder: Lowell G. Bradford, Le Grand, CA, USA.

Choice of Comparators Characteristics used for grouping varieties to identify the most similar Variety of Common Knowledge

Organ/Plant Part	Context	State of Expression in Group of Varieties
Fruit	flesh colour	yellow
Fruit	size	large

Fruit	flavour	sub-acid
Flower	bloom time	early

Most Similar Varieties of Common Knowledge identified (VCK)

Name	Comments
'Spring Bright'	'Spring Bright' nectarine is a grand parent to the candidate variety. It is yellow fleshed and matures at the same time
'Ruby Sweet'	'Ruby Sweet' nectarine is a yellow fleshed nectarine, sub-acid flavour variety that matures with the candidate variety
'Kay Pearl'	'Kay Pearl' nectarine is white fleshed and sub-acid in flavour. Matures with the candidate variety
'Grand Bright'	'Grand Bright' nectarine is a large yellow fleshed nectarine the matures 7-10 days later than the candidate variety.

Varieties of Common Knowledge identified and subsequently excluded

Variety	Distinguishing Characteristics		State of Expression in Candidate Variety	State of Expression in Comparator Variety	Comments
'Ruby Sweet'	fruit	size	large	medium	'Ruby Sweet' nectarine is rejected because it has fruit that is smaller. it also has a higher chill requirement.
'Kay Pearl'	fruit	flesh colour	yellow	white	'Kay Pearl' nectarine is rejected because it has different flesh colour
'Grand Bright'	fruit	maturity	early	medium	'Grand Bright' nectarine is rejected because of difference in maturity. It is also acid in flavour.

USA	2005	Granted	'Pacific Sweet'

First sold in the USA in Jan 2007

Description: **Peter Buchanan**, Hodgson vale, QLD

Details of Application

Application Number	2011/054
Variety Name	'Zalsaney'
Genus Species	<i>Alstroemeria</i> hybrid
Common Name	Peruvian Lily
Synonym	Whitney
Accepted Date	20 Sep 2011
Applicant	Van Zanten Plants B.V. The Netherlands
Agent	Ramm Botanicals Holdings Pty Ltd, Kangy Angy, NSW
Qualified Person	Megan Bartley

Details of Comparative Trial

Overseas Testing	Community Plant Variety Office (CPVO)
Authority	
Overseas Data	INC 01021
Reference Number	
Location	Kangy Angy, NSW
Descriptor	<i>Alstroemeria</i> TG/29/7
Period	August 2012 - February 2013
Conditions	The trial was conducted to verify the CPVO test report conducted by Naktuinbouw at Roelofarendsveen, Holland. Descriptions of the comparators were taken from descriptions published in the Plant Varieties Journal. Tissue cultured cuttings were supplied by Van Zanten Plants B. V. in May 2012. The Tissue cultured plants were planted into Ellagaard plugs under mist then potted to 140mm standard nursery pots in August. The plants were grown outdoors in the open. The light was natural. No additional light was given. Potting mix was a general-purpose type based on composted pine bark pH 5.9. Controlled release fertilizer only was used and no supplementary fertiliser was used. Overhead watering was used as necessary. Routine pest and disease sprays were carried out.
Trial Design	The trial was grown in a completely randomised design. The total number of plants in the trial was 10.
Measurements	All the observations were taken on 8 different flower stems. The measurements were taken in February, 2013.
RHS Chart - edition	1995

Origin and Breeding

Controlled pollination: 'Zalsaney' arose from crossing between mother 1907-11 and father 871069-2 at Rijsenhout. The selection work was done by Van Zanten Plants B.V. at the reasearch station in Rijsnehout, Holland during the years 2006 - 2010. The seedling was selected on the basis of flower colour, plant shape and plant quality and propagated by tissue culture through 10 generations. Breeder: Van Zanten Plants B.V. The Netherlands.

Choice of Comparators Characteristics used for grouping varieties to identify the most similar Variety of Common Knowledge

First sold in Italy Sep 2008

Description: **Megan Bartley**, Ramm Botanicals, Kangy Angy, 2258 NSW.

Details of Application

Application Number	2009/271
Variety Name	'Zaprilet'
Genus Species	<i>Alstroemeria</i> hybrid
Common Name	Peruvian Lily
Synonym	Letizia
Accepted Date	11 Dec 2009
Applicant	Van Zanten Plants B.V. The Netherlands
Agent	Ramm Botanicals Holdings Pty Ltd, Kangy Angy, NSW
Qualified Person	Megan Bartley

Details of Comparative Trial

Overseas Testing	Community Plant Variety Office (CPVO)
Authority	
Overseas Data	INC 919
Reference Number	
Location	Kangy Angy, NSW
Descriptor	<i>Alstroemeria</i> TG/29/7
Period	August 2012 – February 2013
Conditions	The trial was conducted to verify the CPVO test report conducted by Naktuinbouw at Roelofarendsveen, Holland. Descriptions of the comparators were taken from descriptions published in the Plant Varieties Journal. Tissue cultured cuttings were supplied by Van Zanten Plants B. V. in May 2012. The Tissue cultured plants were planted into Ellgaard plugs under mist then potted to 140mm standard nursery pots in August. The plants were grown outdoors in the open. The light was natural. No additional light was given. Potting mix was a general-purpose type based on composted pine bark pH 5.9. Controlled release fertilizer only was used and no supplementary fertiliser was used. Overhead watering was used as necessary. Routine pest and disease sprays were carried out.
Trial Design	The trial was grown in a completely randomized design. The total number of plants in the trial was 10.
Measurements	All the observations were taken on 8 different flower stems. The measurements were taken in February, 2013.
RHS Chart - edition	1995

Origin and Breeding

Spontaneous mutation: 'Zaprilet' arose from a spontaneous mutation from *Staprioixa* in our greenhouse at Rijsenhout. The breeding work was done by Van Zanten Plants B.V. at the research station in Rijsenhout, Holland during the years 2002 - 2007. The mutation was selected on the basis of flower colour, plant shape and plant quality and propagated by tissue culture through 10 generations. Breeder: Van Zanten Plants B.V. The Netherlands.

Details of Comparative Trial

Overseas Testing Authority	Community Plant Variety Office
Overseas Data Reference Number	PTU 783
Location	Winmalee, NSW
Descriptor	<i>Petunia</i> (<i>Petunia</i> Juss.) TG/212/1 Corr.
Period	September - November 2012
Conditions	Overseas data was verified in Australia by local observations at Winmalee, NSW in open beds, stock planted into 140mm pots . Trial of the candidate was conducted with typical commercial conditions prior to assessment. Comparisons of characteristics are based on CPVO descriptions, which were assessed under conditions of controlled environment at Bundessortenamt, Hannover, Germany.
Trial Design	Fifteen pots of each variety arranged in a completely randomised design
Measurements	From ten plants at random. One sample per plant.
RHS Chart - edition	2007

Origin and Breeding

Controlled pollination: seed parent 'AMM482' x pollen parent 'SCAB1'. The seed parent is characterised by a trailing plant growth habit. The pollen parent is characterised by a red purple flower colour. Selection criteria: mounding plant growth habit, blue flower colour. Propagation: vegetative cuttings and micropropagation were found to be uniform and stable. Breeders: Takeshi Kanaya, Kanagawa, Japan and Yasuko Isobe, Shiga, Japan.

Details of Comparative Trial

Overseas Testing Authority	United States Patent and Trade Mark Office (USPTO)
Overseas Data Reference Number	PP12224
Location	Kearney, California
Descriptor	TG/41/5
Period	1999
Conditions	Trees were grown on a 5.49 X 4.88 m spacing
Trial Design	CRD
Measurements	Taken as accordingly UPOV technical guideline

Origin and Breeding

Controlled Pollination: 'Tulare Giant' originated from the following cross made in 1987: Female parent: 'Empress' X Male Parent 'Primacotes'. Seventy seeds were obtained from this cross and these were planted in 1988 at Parlier, California. In the spring of 1990 these young nursery trees were transplanted into seedling rows. A single tree of the new cultivar was selected during 1991 when seedlings fruited. The seedling was initially designated 3-6E-13. This selection exhibited vigorous growth, extreme precocity, formed flowers in abundance and set heavy crops of large early maturing dark purple fruit under a greyish epidermal bloom. The new cultivar was then asexually reproduced by budding and grafting, as well as being evaluated on a range of rootstocks from 1092 to 1996. Breeder Theodore M. DeJong and James F. Doyle.

Details of Comparative Trial

Overseas Testing Authority	New Zealand Plant Variety Rights Office
Overseas Data Reference Number	3127
Location	Motueka, New Zealand, Latitude 41°058 S, Longitude 172°584 E.
Descriptor	UPOV TG/43/7
Period	2011/12 to 2012/13
Conditions	Warm temperate climate
Trial Design	Randomised complete block. Twelve genotypes, 4 replicates and 4 blocks.
Measurements	In accordance with UPOV technical guideline
RHS Chart - edition	1996

Origin and Breeding

Controlled pollination: The new variety 'Adele' was created in the course of a planned breeding program. The parents used to make the cross in 1990, were the varieties 'Chilcotin' (seed parent) and selection 86107058 (pollen parent). The new variety was selected from amongst seedlings in the 1993-94 fruiting season and was assigned the breeder code, 90312CF0 (subsequently coded HR119 at the advanced selection stage). The new variety has since been named 'Adele'. Breeder: The Horticulture and Food Research Institute of New Zealand Ltd.

First sold in the New Zealand in July 2007.

Description: **Joseph Stephens**, Motueka, New Zealand.

Details of Application

Application Number	2011/151
Variety Name	'Korere'
Genus Species	<i>Rubus idaeus</i>
Common Name	Raspberry
Synonym	Nil
Accepted Date	14 Nov 2011
Applicant	The New Zealand Institute for Plant and Food Research Limited, Mt Albert, Auckland, NZ
Agent	AJ Park, Marcus Clarke Street, ACT
Qualified Person	Joseph Stephens

Details of Comparative Trial

Overseas Testing Authority	New Zealand Plant Variety Rights Office
Overseas Data Reference Number	3126
Location	Motueka, New Zealand, Latitude 41°058 S, Longitude 172°584E
Descriptor	UPOV TG/43/7
Period	2011/12, 2012/13 seasons
Conditions	Warm temperate climate
Trial Design	Randomised complete block. Twelve genotypes, 4 replicates and 4 blocks
Measurements	In accordance with UPOV technical guideline
RHS Chart - edition	1966

Origin and Breeding

Controlled pollination: The new variety of red raspberry, *Rubus idaeus* L., was created in the course of a planned breeding programme. The parents used to make the cross in 1991, were the varieties 'Moutere' (seed parent) and selection D188 (pollen parent). The new variety was selected from amongst populations of seedlings in the 1994/95 fruiting season and was assigned the breeder code 91318RKB-2 (subsequently coded HR121 at the advanced selection stage). The new variety has since been named 'Korere'. Breeder: The Horticulture and Food Research Institute of New Zealand Ltd.

Choice of Comparators Characteristics used for grouping varieties to identify the most similar Variety of Common Knowledge

Organ/Plant Part	Context	State of Expression in Group of Varieties
Very young shoot	anthocyanin colouration of apex during rapid growth	absent
Peduncle	Presence of anthocyanin colouration	present
Fruit	colour	medium red
Fruit	main bearing type	only on previous year's cane in summer

Accepted Date	13 Jan 2012
Applicant	Harry Schreuders
Agent	Grandiflora Nurseries Pty Ltd, Skye, VIC
Qualified Person	Christopher Prescott

Details of Comparative Trial

Location	Clyde, VIC
Descriptor	Rose (<i>Rosa</i>) UPOV TG/11/8.
Period	May 2012 - January 2013
Conditions	The trial plants were on their own roots and planted on the 30th of November 2010. For the examination the plants were cut back to approximately 150 tall on the 16th of November 2012 and allowed to grow for 1 cycle. Nutrition was maintained as part of a hydroponic system used for the commercial production of cut flower roses. Pest and diseases were controlled by the use of an integrated pest management regime, with chemical spraying used if necessary
Trial Design	The trial was set on raised benches in two grow bags of 150 wide x 100 depth x 1100 long (one grow bag for the candidate, and one for the comparator) that consisted of co-co peat (coir) set in a double row. each grow bag contained 6 plants
RHS Chart - edition	2007

Origin and Breeding

Spontaneous mutation: 'Grandgoldelic' discovered at Grandiflora Nurseries in Skye, VIC by Mr Harry Schreuders in April 2009. Several cuttings were taken from a stem that had shown a different flower colour from the parent and planted in co-co peat slabs to ascertain whether the mutation was distinct. From these plants more cuttings, 360 plants were propagated and planted in co-co peat slabs to establish stability and uniformity. The parent has pink coloured flowers. Breeder: Harry Schreuders.

RHS Chart - edition	2007

Origin and Breeding

Controlled pollination: 'GF04-70Y-10' x 'GF0708'. The variety was bred by Harry Schreuders at his property in Skye, Victoria Australia in 2007 between July and November. The seedling was selected from a population of approximately 20,000 seedlings due to flower colour and separated from the seedling bed and planted into a co-co's slab. Eight plants were propagated from the initial seedling as cuttings. From these plants twenty more cuttings were taken after selection for growth habit. From this selection cuttings were made and a row of 360 plants were planted to test for flower production. From this selection the variety was chosen to be planted into a commercial trial The seed parent has dark yellow flowers and the pollen parent has red flower colour. All work was either carried out or was under the supervision of Mr Harry Schreuders.

Description: Christopher Prescott, Clyde, VIC

Details of Application

Application Number	2011/298
Variety Name	'GRA7945'
Genus Species	<i>Rosa</i> hybrid
Common Name	Rose
Synonym	
Accepted Date	13 Jan 2012
Applicant	Harry Schreuders
Agent	Grandiflora Nurseries Pty Ltd, Skye, VIC
Qualified Person	Christopher Prescott

Details of Comparative Trial

Location	Clyde, VIC
Descriptor	Rose(<i>Rosa</i>) UPOV TG/11/8.
Period	12 May 2012- 2 January 2013
Conditions	The trial plants were on their own roots and planted on the 20th of September 2010. For the examination the plants were cut back to approximately 150mm tall on the 16th of November 2012 and allowed to grow for 1 cycle. Nutrition was maintained as part of a hydroponic system used for the commercial production of cut flower roses. Pest and diseases were controlled by the use of an integrated pest management regime, with chemical spraying used if necessary
Trial Design	The trial was set on raised benches in two grow bags of 150mm wide x 100mm depth x 1100mm long (one grow bag for the candidate, and one for the comparator) that consisted of co-co peat (coir) set in a double row. Each grow bag contained 10 plants.
RHS Chart - edition	2007

Origin and Breeding

Controlled pollination: 'GF04-82-15' x 'GF0707' at Grandiflora nurseries, Skye, VIC in 2007 between July and November. The seedling was selected from a population of approximately 20,000 seedlings due to flower colour and separated from the seedling bed and planted into a co-co's slab. Eight plants were propagated from the initial seedling as cuttings. From these plants twenty more cuttings were taken after selection for growth habit. From this selection cuttings were made and a row of 360 plants were planted to test for flower production. From this selection the variety was chosen to be planted into a commercial trial Both seed and pollen parents produce red flowers. Breeder, Harry Schreuders.

RHS Chart - edition	2007

Origin and Breeding

Spontaneous mutation: 'GRA61361' discovered at Grandiflora Nurseries in Skye, VIC by Mr Harry Schreuders in March 2010. Several cuttings were taken from a stem that had shown a different flower colour from the parent and planted in co-co peat slabs to ascertain whether the mutation was distinct. From these plants more cuttings, 360 plants were propagated and planted in co-co peat slabs to establish stability and uniformity. Breeder: Harry Schreuders.

Measurements	Measurements were taken at random
RHS Chart - edition	2007

Origin and Breeding

Controlled pollination: 'GF06-136' x 'GF0613' at Grandiflora Nurseries' breeding glasshouse, Skye, VIC between July and November 2005. The first selection was taken from a large population in early 2006 based on flower colour and flowering laterals. This seedling was planted into a coco peat (coir) slab and allowed to grow further. Later in 2006 cuttings were taken from the seedling for an eight plant trial (second selection). This was repeated to a 20 plant and then to a 170 plant trial over the subsequent two years with cuttings for each trial coming from the plants in the preceding trial. This was to not only evaluate its suitability as a viable cut flower rose variety, but also to evaluate its uniformity and stability. The seed parent has broad ovate bud shape. The pollen parent has semi-double purple flowers with few petals. Breeder, Harry Schreuders.

Details of Application

Application Number	2012/002
Variety Name	'Sunburn'
Genus Species	<i>xDisphyllum</i> (<i>Disphyma crassifolium</i> ssp. <i>clavellatum</i> x <i>Glottiphyllum longum</i>)
Common Name	Rounded noon flower
Synonym	Nil
Accepted Date	25 Jan 2012
Applicant	Attila Kapitany, Boronia, VIC.
Agent	N/A
Qualified Person	Attila Kapitany

Details of Comparative Trial

Location	1 The Lough Court, Narre Warren, VIC
Descriptor	National Descriptor for <i>xDisphyllum</i> (PBR DISP)
Period	Feb 2012
Conditions	Trial conducted on sandy soil with clay sub-base. Irrigated when necessary. Slow release fertiliser with low Nitrogen ratio was used. Space planted to ensure sufficient growth of the plants. All plants growing normally.
Trial Design	10 plants of each variety planted in a garden setting.
Measurements	Visual observations taken in accordance with the National Descriptor.
RHS Chart - edition	2005

Origin and Breeding

Controlled pollination: Since 2002 the breeder has been growing and trialling Australian native succulents for their potential in the landscape horticulture industry. Thousands of plants raised mostly from seed and then grown in field trials on a one acre property designed in part for this purpose. Trials were first undertaken to see if native succulents could be grown successfully integrated with exotic succulents in a garden setting. In early 2005, a more focused approach on the small number of native species that were proving successful in a garden environment. The biggest hurdle with the native succulents up until this point was a limited flowering season. The plan was to select superior clones that flowered longer or better or larger. Then trying to hybridise some of these. Interestingly an exotic succulent from Africa proved to be a perfect candidate to introduce the characteristic of primarily year round flowers. Also a yellow/orange colour that was lacking in breeder's Australian material. Pollen came from *Glottiphyllum longum* and was introduced by paint brush to *Disphyma crassifolium* subsp. *clavellatum*. This resulted in one of the only two seedlings surviving from hundreds planted to be put forward in this application. As this is an intergeneric cross, *xDisphyllum* 'Sunburn' is infertile and so poses no weed potential. Breeder: Attila Kapitany, Boronia, VIC.

Choice of Comparators

‘Sunburn’ is the first inter-generic hybrid between *Disphyma crassifolium* ssp. *clavellatum* × *Glottiphyllum longum* and no other similar varieties exist anywhere. Therefore, for the purpose of the PBR trial, the male and female parents were used as comparators. ‘Sunburn’ exhibits attributes from both parents.

Qualified Person	Peter Abell

Details of Comparative Trial

Location	Ozbreed, Cupitts Lane, Clarendon, NSW
Descriptor	National Descriptor for Alternanthera (PBR ALTE)
Period	August 2012 to January 2013
Conditions	Open nursery area with automatic overhead irrigation. Climatic conditions typical for the area near Windsor for the winter to summer period of the trial. Plants were potted into 200mm standard pots and fertilised with a single top dressing of controlled release fertiliser which lasted for the period of the trial.
Trial Design	Two blocks each containing 15 plants of each of the candidate, nearest variety of common knowledge (VCK). All plants were reproduced from cuttings.
Measurements	The data taken reflects the characteristics of the candidate variety and how it differs from the most similar VCK.
RHS Chart - edition	Open nursery area with automatic overhead irrigation. Climatic conditions typical for the area near Windsor for the winter to summer period of the trial. Plants were potted into 200mm standard pots and fertilised with a single top dressing of controlled release fertiliser which lasted for the period of the trial.

Origin and Breeding

Open pollination: In February 2008 a range of genotypes were assembled to see whether they would hybridise when placed together. The parental form is characterised by taller plant height. A selection was made from a batch of seedlings produced from this open pollination. The candidate was seen to be very compact and a single leaf colour. It was propagated and assessed for agronomic factors including propagation, speed of production and growth habit. The variety 'LRU30' remains stable with nil offtypes being observed with all selection characters being expressed. Breeder: Jairo Alberto Schmidt, Sao Jose do rio Preto.

RHS Chart - edition	2007

Origin and Breeding

Spontaneous mutation: The new cultivar is a product of a whole plant natural mutation. 'Brazilian Red' was observed as a single plant in a greenhouse of *Alternanthera dentata* plants on September 10, 2005 in Sao Jose do Rio Preto, Brazil. The parental plant is characterised by non-variegated leaves. The breeder selected the natural mutation of *Alternanthera dentata* for the best colour and shape of the plant. Asexual reproduction of the new cultivar 'Brazilian Red' by vegetative cuttings was performed in Sao Jose do Rio Preto, Brazil and Oxnard, California-USA and has shown that the unique features of this cultivar are stable and reproduced true-to-type in successive generations. Breeder: Lucilene Anatriello, Sao Jose do Rio Preto, Brazil.

Co on Name	Rugosa Rose
Synonym	
Accepted Date	08 Nov 2010
Applicant	Judy Barrett, Mt Eliza, VIC
Agent	
Qualified Person	Christopher Prescott

Details of Comparative Trial

Location	Clyde, VIC
Descriptor	Rose (Rosa) UPOV TG/11/8.
Period	November 2010 - January 2013
Conditions	The trial plants were on their own roots and planted on the 30th of November 2010. For the examination the plants were cut back to approximately 150 tall on the 16th of November 2012 and allowed to grow for 1 cycle. Nutrition was maintained as part of a hydroponic system used for the commercial production of cut flower roses. Pest and diseases were controlled by the use of an integrated pest management regime, with chemical spraying used if necessary
Trial Design	The trial was set on raised benches in two grow bags of 150 wide x 100 depth x 1100 long (one grow bag for the candidate, and one for the comparator) that consisted of co-co peat (coir) set in a double row. each grow bag contained 6 plants
Measurements	Measurements were taken at random
RHS Chart - edition	2007

Origin and Breeding

Open pollination and seedling selection: 'Morningstar Estate' is the resultant seedling from a chance pollination. The hip was discovered on a plant of *Rugosa alba*. It is believed the pollen parent was either of the *Rosa rugosa* hybrid's 'Schneezwerg' or 'Lily Freeman'. The hip was harvested by John Nieuwesteeg at his property in Coldstream VIC and planted in 2004. The new seedling was selected due to its high vigor in comparison to the parent *Rugosa alba* and flower colour

Variety Name	'Littlelep'
Genus Species	<i>Leptospermum sericeum</i>
Common Name	Silver Tea Tree
Synonym	Nil
Accepted Date	19 Feb 2013
Applicant	George A Lullfitz, Wanneroo, WA
Qualified Person	Peter Abell, SPROCZ Pty Ltd, Bilpin, NSW

Details of Comparative Trial

Location	Caporn street Wanneroo, WA
Descriptor	General Descriptor (for plant varieties with no descriptor available)
Period	January 2012 to November 2012
Conditions	Potted into 140mm containers and placed under overhead irrigation. The plants were rowed and blocked in full sun with limited influence from the surrounding environment. A single application of CRF fertiliser at potting lasted the trial period.
Trial Design	Plants were potted and placed into single rows of candidate in one row with the comparator beside. There were 15 plants of each variety
Measurements	Observations were made on plants parts. The data taken reflects the characteristics of the candidate variety and how it differs from the most similar VCK.
RHS Chart - edition	2007

Origin and Breeding

Open pollination: In September 2009 a very compact form with unusually large flowers of the species was observed growing in a batch of seed grown nursery stock. This plant was selected and grown on for testing. The first batches of cuttings were taken (generation 1). From September 2009 to September 2012 four more generations were grown from cuttings. The variety has proven uniform and stable throughout this time. Breeder: George A. Lullfitz, Wanneroo, WA.

Details of Application

Application Number	2012/098
Variety Name	'Fusion'
Genus Species	<i>xTriticosecale</i>
Common Name	Triticale
Synonym	Nil
Accepted Date	20 Jun 2012
Applicant	Australian Grain Technologies Pty Ltd, Adelaide, SA
Agent	N/A
Qualified Person	Andrew Cecil

Details of Comparative Trial

Location	Roseworthy, South Australia
Descriptor	Triticale (<i>xTriticosecale</i>) UPOV TG /121/3
Period	2012
Conditions	A comparative trial was sown on the Roseworthy Campus of the University of Adelaide. In 2011 the area carried a lentil crop which was harvested for grain and the resultant stubble was baled and removed. Pre-seeding herbicides Boxer Gold (2.5L), Roundup Attack (800 ml), trifluralin (1.0L) and Avadex (1.8L) together with an insecticide Imidan (300ml) were applied prior to seeding. The trial was sown on 1st June 2012 and 90kg DAP + 2.5% zinc fertiliser was applied with the seed. The season was very favourable for growth of the crop and of weeds and disease, so the trial was sprayed post emergence with Conclude (700 ml), Lontrel (120ml) to control weeds and Dimethoate (100ml) insecticide. A further herbicide spray was applied on 1st August 2012, Topik (85ml), to control weeds. The trial was sprayed on 31st August to control fungal pathogens with Prosaro 150mls + Hasten together with zinc/magnesium chelates (2.0L). A further fungicide spray of Prosaro 150mls + BS1000 was applied on 5th October 2012. At no time was the trial stressed by the weather so varieties were able to fully express their genetic potential. The trial was harvested on 16th November 2012
Trial Design	Randomised block design of 3 blocks and 16 entries consisting of comparators and potential candidates. Sown in 12 ranges of 4 plots wide, block 1 being in ranges 1 to 4 and so on. Plots were 1.25m wide (5 rows) and 3.2m long. There were approximately 1000 plants per plot. Qualitative characters were recorded for every replicate at the appropriate growth stage.
Measurements	Quantitative characters were measured on 10 randomly sampled plants from each replicate, the samples being taken at the appropriate growth stage or after maturity. Statistical analyses were completed using GENSTAT software.
RHS Chart - edition	N/A

Origin and Breeding

Controlled pollination: A cross was constructed involving Triticale by Bread wheat F1 and a breeders line resulting in a population coded TS03014 with the pedigree EVEREST/STYLET//TSA0026. Seed was multiplied, over consecutive generations, by self pollination. From the F2 population heads selected from elite individuals, based on plant type and rust resistance, were bulked and the grown as an F3 population. 100 Heads from the F3 population were selected based on stem rust resistance and the seed from each head planted individually and grown as a head hill. 17 Elite plants were progressed based on their rust resistance, maturity, and plant height, and grown as individual rows, at Roseworthy SA, and in disease nurseries in NSW, in winter 2006. These lines entered Stage 1 testing in 2007 and were evaluated for agronomic performance and disease resistance at nurseries located in SA and NSW. Testing in stage 2 and above was conducted in SA, Vic, NSW and WA in both agronomic and disease nursery evaluation plots. At the end of stage 2 testing in 2008 an individual (TS03014-H16) was identified, for yield, disease resistance and grain quality, and named TSA0291. After continued testing in 2009 in SA, Vic, NSW and WA; pure seed selections were multiplied during 2010 and 2011. Seed of TSA0291 began commercial multiplication in 2012. Breeder(s): Dr Haydn Kuchel, Dr Jason Reinheimer, Dr James Edwards, Britt Kalmeier, Australian Grain Technologies Pty Ltd.

Details of Comparative Trial

Location	Great Northern Highway, Muchea WA
Descriptor	TG/225/1 Corr. Waxflower
Period	Sep 2010 to Nov 2012
Conditions	The trial was planted into the ground in full sun. Soil is lateritic sand located in the northern end of the Darling range. It is irrigated by drippers. The conditions subjected to the trial cover all seasons over a two year period.
Trial Design	Plants were in single rows of candidate and comparator. There were 10 plants of each variety.
Measurements	The data taken reflects the characteristics of the candidate variety and how it differs from the most similar VCK.
RHS Chart - edition	2007

Origin and Breeding

Single plant selection: In Sep 2006 a selection of an atypical dense very low growing form from within a population of the species at Lancelin WA. Nov 2006, vegetative propagation from white flowered selection (generation 1). Mar 2007, further testing based on the initial propagation and production responses. Apr 2007, plants re-propagated (generation 2), potted, planted and evaluated for habit and agronomic traits. July 2007, final assessment done. Aug 2007, propagation from this mother stock (generation 3) and initiated in to Tissue Culture. Mar 2008, stock material re-propagated (generation 4) some TC material established ex-culture. Material potted and planted. Sep 2009, propagated from TC and cutting material (Generation 5). Mar 2010, trials planted for testing and comparison purposes. The variety 'FlatwaxwhiteGL' demonstrates the characters for which it was selected. All generations were uniform and stable with no off types being observed. Breeder: George A. Lullfitz, Wanneroo, WA.

Choice of Comparators Characteristics used for grouping varieties to identify the most similar Variety of Common Knowledge

Organ/Plant Part	Context	State of Expression in Group of Varieties
Flower	colour	white
Leaf	attitude in relation to stem	erect
Flowering branch	angle of axillary shoot (5th node from distal end)	small
Flower	type	single
Flower	arrangement of petals	free
Sepal	incision of margin	absent

Most Similar Varieties of Common Knowledge identified (VCK)

Name	Comments
'Snowflake'	Closed variety based on grouping characters

Varieties of Common Knowledge identified and subsequently excluded

Variety	Distinguishing Characteristics	State of Expression in Candidate Variety	State of Expression in Comparator Variety	Comments
'Alba'	Flower diameter small		medium to large	Considered and then discarded due larger flower diameter and axillary flowers

Variety Description and Distinctness - Characteristics which distinguish the candidate from one or more of the comparators are marked with a tick.

Organ/Plant Part: Context	'FlatwaxwhiteGL'	'Snowflake'

Origin and Breeding

Controlled pollination The original cross for LPB06-1120 (Kukri/Sunvale) was made by Dr Bertus Jacobs, LongReach Plant Breeders, in Adelaide, SA in 2003. A doubled haploid population was developed from the F1 seed in 2004. Seed was multiplied in a summer nursery in 2004/05 at Manjimup, Western Australia. The F1HD2 line was evaluated by LRPB in yield and quality trials commencing in 2005.

Origin and Breeding

Controlled pollination: The initial cross (TEAL/C93.8//9908) was made in 2001 by Dr. Akram Khan within Value Added Wheat CRC (VW CRC) in Cobbitty, NSW to breed new soft wheat varieties for Australian markets. The parent TEAL was awnless and C93.8 had red grains. The other parent 9908 was susceptible to stripe rust. The line C51021 was selected from the progeny in Cobbitty in 2004. In 2008, C51021 was transferred to LongReach Plant Breeders by the breeder on behalf of VWCRC as a Stage 3 line. The line was then evaluated by LRPB in yield and quality trials commencing in 2008. In 2011 the line C51021 was released as 'LongReach Impala'.

Common Name	Wheat
Synonym	Nil
Accepted Date	16 Aug 2012
Applicant	Australian Grain Technologies Pty Ltd, Adelaide, SA
Agent	N/A
Qualified Person	Andrew Cecil

Details of Comparative Trial

Location	Roseworthy, South Australia
Descriptor	Wheat (<i>Triticum aestivum</i>) UPOV TG/3/11
Period	2012
Conditions	A comparative trial was sown on the Roseworthy Campus of the University of Adelaide. In 2011 the area carried a lentil crop which was harvested for grain and the resultant stubble was baled and removed. Pre-seeding herbicides Boxer Gold (2.5L), Roundup Attack (800 ml), trifluralin (1.0L) and Avadex (1.8L) together with an insecticide Imidan (300ml) were applied prior to seeding. The trial was sown on 30th May 2012 and 90kg DAP + 2.5% zinc fertiliser was applied with the seed. The season was very favourable for growth of the crop and of weeds and disease, so the trial was sprayed post emergence with Conclude (700 ml), Lontrel (120ml) to control weeds and Dimethoate (100ml) insecticide. A further herbicide spray was applied on 1st August 2012, Topik (85ml), to control weeds. The trial was sprayed on 31st August to control fungal pathogens with Prosaro 150mls + Hasten together with zinc/magnesium chelates (2.0L). A further fungicide spray of Prosaro 150mls + BS1000 was applied on 5th October 2012. At no time was the trial stressed by the weather so varieties were able to fully express their genetic potential. The trial was harvested on 17th November 2012
Trial Design	Randomised block design of 3 blocks and 16 entries consisting of comparators and potential candidates. Sown in 12 ranges of 4 plots wide, block 1 being in ranges 1 to 4 and so on. Plots were 1.25m wide (5 rows) and 3.2m long. There were approximately 1000 plants per plot. Qualitative characters were recorded for every replicate at the appropriate growth stage.
Measurements	Quantitative characters were measured on 10 randomly sampled plants from each replicate, the samples being taken at the appropriate growth stage or after maturity. Statistical analyses were completed using GENSTAT software.
RHS Chart - edition	N/A

Origin and Breeding

Controlled pollination: A cross between two F1 parents CO7412 (AGT Scythe/CO7138(F1)) and CO7413 (RAC1105/CO7165(F1)) was completed at the end of 2004 resulting in the population coded CO7454 with pedigree (AGT Scythe/CO7138//RAC1105/CO7165). Doubled Haploids (913) were produced from the F1 seed and then multiplied at Roseworthy over winter 2006 and Bordertown in the summer of 2006/7. Lines (662) meeting basic agronomic requirements (maturity and height) were grown in Stage 1 multi-location trials in SA and WA in 2007 and then progressed through Stage 2 testing in 2008, Stage 3 testing in 2009 and Stage 4 testing in 2010. Over this time, lines were evaluated for grain yield, agronomic performance, end use quality and disease resistance at nurseries located in WA, SA, Vic, NSW and QLD. At the end of Stage 2 testing in 2008 an elite individual (CO7454-55*25) was identified and named RAC1718. RAC1718 was then submitted to the National Variety Testing system in 2011 and 2012. After multiplying pure seed selections during 2010 and 2011, seed of RAC1718 began commercial multiplication in 2010/11 and 2012. Breeder Dr Haydn Kuchel, Australian Grain Technologies Pty Ltd.

Description: **Andrew Cecil**, Australian Grain Technologies Pty Ltd, Roseworthy, SA.

Details of Application

Application Number	2012/142
Variety Name	'GRENADE CL Plus'
Genus Species	<i>Triticum aestivum</i>
Common Name	Wheat
Synonym	Nil
Accepted Date	15 Aug 2012
Applicant	Australian Grain Technologies Pty Ltd, Adelaide, SA
Agent	N/A
Qualified Person	Andrew Cecil

Details of Comparative Trial

Location	Roseworthy, South Australia
Descriptor	Wheat (<i>Triticum aestivum</i>) UPOV TG/3/11
Period	2012
Conditions	A comparative trial was sown on the Roseworthy Campus of the University of Adelaide. In 2011 the area carried a lentil crop which was harvested for grain and the resultant stubble was baled and removed. Pre-seeding herbicides Boxer Gold (2.5L), Roundup Attack (800 ml), trifluralin (1.0L) and Avadex (1.8L) together with an insecticide Imidan (300ml) were applied prior to seeding. The trial was sown on 30th May 2012 and 90kg DAP + 2.5% zinc fertiliser was applied with the seed. The season was very favourable for growth of the crop and of weeds and disease, so the trial was sprayed post emergence with Conclude (700 ml), Lontrel (120ml) to control weeds and Dimethoate (100ml) insecticide. A further herbicide spray was applied on 1st August 2012, Topik (85ml), to control weeds. The trial was sprayed on 31st August to control fungal pathogens with Prosaro 150mls + Hasten together with zinc/magnesium chelates (2.0L). A further fungicide spray of Prosaro 150mls + BS1000 was applied on 5th October 2012. At no time was the trial stressed by the weather so varieties were able to fully express their genetic potential. The trial was harvested on 17th November 2012
Trial Design	Randomised block design of 3 blocks and 16 entries consisting of comparators and potential candidates. Sown in 12 ranges of 4 plots wide, block 1 being in ranges 1 to 4 and so on. Plots were 1.25m wide (5 rows) and 3.2m long. There were approximately 1000 plants per plot. Qualitative characters were recorded for every replicate at the appropriate growth stage.
Measurements	Quantitative characters were measured on 10 randomly sampled plants from each replicate, the samples being taken at the appropriate growth stage or after maturity. Statistical analyses were completed using GENSTAT software.

Origin and Breeding

Controlled pollination: A cross was completed between Gladius and an F1 CO7443 (RAC1268*2/3/Janz*2//Wilg4/11A) in 2004 resulting in the population coded CO7615 with pedigree (Gladius/4/RAC1268*2/3/Janz*2//Wilg4/11A). BC1F1 seed was grown over the winter of 2005 at Roseworthy (SA) and the F2 population was grown over summer 2005/06. The F3 bulk was grown during 2006 at Roseworthy and plants showing tolerance to imidazolinone herbicide were selected and multiplied over summer 2006/07. These lines entered stage 1 testing in 2007, stage 2 testing in 2008 and stage 4 testing in 2009. Over this time, lines were evaluated for tolerance to imidazolinone herbicide, agronomic performance, end use quality and disease resistance at nurseries located in WA, SA, Vic, NSW and QLD. At the end of stage 2 testing in 2008 an elite individual (CO7615-292) was identified and named RAC1689. After multiplying pure seed selections during 2008/9 and 2009, seed of RAC1689R began commercial multiplication in 2009/10 and 2010. Breeder Dr Haydn Kuchel, Australian Grain Technologies Pty Ltd.

2003/197	<i>Pelargonium</i>	<i>xhortorum</i>	Sil Onno	Balsho Purple	Pelargonium

GRANTS REVOKED

The following varieties are no longer
under PBR protection

App No.	Genus	Species	Variety	Synonym	Common Name
1998/173	<i>Campanula</i>	<i>punctata</i>	Mystic Bells		Bell Flower

CORRIGENDA

MELON

Cucumis melo

‘Sweet Persia’

Application No: 2012/252

‘Sunny Persia’

Application No: 2012/253

The botanical name of the above varieties was corrected to *Cucumis melo*.

INTERSPECIFIC PLUM

Prunus salicina x *Prunus armeniaca*

‘RUBYCOT’

Application No: 2009/092

The Applicant’s name was corrected from The State of Queensland acting through the Department of Agriculture, Fisheries and Forestry, Horticulture Australia Limited to **The State of Queensland acting through the Department of Agriculture, Fisheries.**

Part 3 Appendices

The appendices to *Plant Varieties Journal* (**Vol. 26 Issue 1**) are listed below:

- [Home](#)
- [Appendix 1 - Fees](#)
- [Appendix 2 - Plant Breeder's Rights Advisory Committee](#)
- [Appendix 3 - Index of Accredited Consultant 'Qualified Persons'](#)
- [Appendix 4 - Index of Accredited Non-Consultant 'Qualified Persons'](#)
- [Appendix 5 - Addresses of UPOV and Member States](#)
- [Appendix 6 - Centralised Testing Centres](#)
- [Appendix 7 - List of Plant Classes for Denomination Purposes](#)
- [Appendix 8 - Register of Plant Varieties](#)

Appendix -1 –Fees

This page sets out the PBR fees associated with applications, examination, certificates, annual and Qualified Person accreditation fees. Please note upcoming changes to fees. Some changes are from 1st July 2012 while others are from 1 October 2012. For more information please read our news article on the [Fee Review Update](#). We will advise of the “[approved means](#)” in advance. These are likely to be electronic and web-based transaction channels.

PBR fees are subject to change. GST does not apply to these statutory fees under Division 81 of the [GST Act 1999](#).

New Application

The Application Fee must accompany the Part 1 application at the time of lodgement. It covers an initial 'examination for acceptance', the issue of a letter of acceptance and provisional protection.

Fee Item/Action	Current Fee	Fee from 1 October 2012 Fee	
		Approved Means	By Another Means
PBR Application	\$300	\$345	\$445

Examination

Applicants have twelve months from the date of acceptance to pay the Lodgement of the Detailed Description Fee (commonly referred to as the “Examination Fee”). The time limit to pay examination fees on imported varieties can be deferred for a maximum of 12 months after the variety has been released from quarantine - contact the PBR Office for further details.

The “Examination Fee” pays for the assessment of the description, the publication of the description and photograph of the new variety in Plant Varieties Journal, the field examination (if any), and any other enquiries necessary to establish eligibility for PBR. examination of the application, including field examination and publication of the description and photograph, will not commence until the Examination Fee has been received.

After the description has been published, successful applicants will be asked to pay the Certificate Fee. This covers the final examination of all details, the production of a certificate and copy of the variety’s description in the PBR Register.

Fee Item/Action	Fee from 1 July 2012
Examination - Single Application	\$1610
Examination - Application based on overseas test data	\$1610

Examination - multiple application rate applicable only when 2 or more varieties of the same species tested at the same site in Australia and when applications and descriptions are lodged simultaneously by the same applicant and QP and examined simultaneously (fee for each variety)	\$1380
Examination - at an authorised Centralised Testing Centre when 5 or more candidate varieties of the same genus are tested simultaneously (fee for each variety)	\$920
Certificate	\$345

Annual Fee

An Annual Maintenance Fee (sometimes called the Annual or Renewal Fee) is payable each year on the anniversary of the granting of the right. The Annual Maintenance Fee must be paid to maintain the grant.

Fee Item/Action	Fee from 1 July 2012	
	Approved Means	By Another Means
Annual Fee	\$345	\$395

Qualified Person

Fee Item/Action	Fee from 1 July 2012 Fee
Application for Accreditation as a Qualified Person	\$50
Renewal of Qualified Person Accreditation (each year)	\$50

APPENDIX 2**Plant Breeders Rights Advisory Committee (PBRAC)**

(Members of the PBRAC hold office in accordance with Section 85 of the *Plant Breeder's Rights Act 1994*.)

Committee Members

<p>Member Representing Plant Breeders</p> <p>Mr Christopher Prescott Prescott Roses Pty Ltd PO Box 507 BERWICK VIC 3806</p>	<p>Member Representing Plant Breeders</p> <p>Mr Denis McGrath Advise Pty Ltd PO Box 63 INVERLEIGH 3321</p>

<p>Chair (Delegate of the PBR Registrar)</p> <p>Mr Doug Waterhouse IP Australia PO Box 200 Woden ACT 2606</p>	

APPENDIX 3 - INDEX OF ACCREDITED CONSULTANT 'QUALIFIED PERSONS'

The following persons have been accredited by the PBR office based on information provided by these persons. From the information provided by the applicants, the PBR office believes that these people can fulfil the role of 'qualified person' in the application for plant breeder's rights. Neither accreditation nor publication of a name in the list of persons is an implicit recommendation of the person so listed. The PBR office cannot be held liable for damages that may arise from the omission or inclusion of a person's name in the list nor does it assume any responsibility for losses or damages arising from agreements entered into between applicants and any person in the list of accredited persons. Qualified persons charge a fee for services rendered.

A guide to the use of the index of consultants:

- locate in the left column of Table 1 the plant group for which you are applying;
- listed in the right column are the names of accredited qualified persons from which you can choose a consultant;
- in Table 2 find that consultant's name, telephone number and area in which they are willing to consult (they may consult outside the nominated area);
- using the "Nomination of Qualified Person" form as a guide, agree provisionally on the scope and terms of the consultancy; complete the form and attach it to Part 1 of the application form;
- when you are notified that your nomination of a consultant qualified person is acceptable in the letter of acceptance of your application for PBR you should again consult the qualified person when planning the rest of the application for PBR.

TABLE 1

PLANT GROUP/SPECIES/FAMILY	CONSULTANT'S NAME (TELEPHONE AND AREA IN TABLE 2)
Actinidia	Lye, Colin Paananen, Ian Richards, Graeme
Agapanthus	Paananen, Ian
Almonds	Cottrell, Matthew Granger, Andrew Swinburn, Garth
Alstroemeria	Paananen, Ian
Ajuga	Paananen, Ian
Apple	Buchanan, Peter Cramond, Gregory Darmody, Liz Engel, Richard Fleming, Graham Langford, Garry Mackay, Alastair Malone, Michael Mitchell, Leslie Paananen, Ian Portman, Anthony Tancred, Stephen Valentine, Bruce

Anigozanthos	Paananen, Ian Kirby, Greg Smith, Daniel
Anthurium	Paananen, Ian
Aroid	Harrison, Peter
Avocado	Cottrell, Matthew Lye, Colin Edwards, Arthur MacGregor, Alison Owen-Turner, John Parr, Wayne Swinburn, Garth Whiley, Tony
Azalea	Barrett, Mike Hempel, Maciej Paananen, Ian
Barley (Common)	Collins, David Downes, Ross Platz, Greg Rhodes, Phil Rogers, Clinton Saunders, James
Berry Fruit	Darmody, Liz Fleming, Graham Zorin, Margaret
Blackberry	Paananen, Ian
Blandfordia	Treverrow, Florence
Blueberry	Paananen, Ian Scalzo, Jessica Zorin, Margaret
Boronia	Umaretiya, Praful
Bougainvillea	Iredell, Janet Willa Prince, John
Brachyscome	Paananen, Ian

Brassica	Bannan, Nathaniel Chequer, Robert Cooper, Kath Downes, Ross Easton, Andrew Fennell, John Gororo, Nelson Johnston, Evan Kadkol, Gururaj Laker, Richard Light, Kate O'Connell Peter Rhodes, Phil Rudolph, Paul Sanders, Milton Saunders, James Mouwen, Heidi Watson, Brigid Zadow, Diane
Brunia	Dunstone, Bob
Buddleia	Robb, John Paananen, Ian
Buffalo Grass	Paananen, Ian
Calibrachoa	Paananen, Ian
Callistemon	Parsons, Rodney
Camellia	Paananen, Ian Robb, John
Cannabis (low THC varieties only and subject to holding a current licence from the appropriate authority)	Warner, Philip
Carnation/Dianthus	Paananen, Ian
Chamelaucium	Umaretiya, Praful

Cereals

Bullen, Kenneth

List of Addresses of Plant Variety Protection Offices in UPOV Member States

Status of Ratification in UPOV member States is available from UPOV website.

APPENDIX 6

CENTRALISED TESTING CENTRES

Under Plant Breeder's Rights Regulations introduced in 1996, establishments may be officially authorised by the PBR office to conduct test growings. An authorised establishment will be known as Centralised Test Centre (CTC).

Usually, the implementation of PBR in Australia relies on a 'breeder testing' system in which the applicant, in conjunction with a nominated Qualified Person (QP), establishes, conducts and reports a comparative trial. More often than not, trials by several breeders are being conducted concurrently at different sites. This makes valid comparisons difficult and often results in costly duplication.

While the current system is and will remain satisfactory, other optional testing methods are now available which will add flexibility to the PBR process.

Centralised Testing is one such optional system. It is based upon the authorisation of private or public establishments to test one or more genera of plants. Applicants can choose to submit their varieties for testing by a CTC or continue to do the test themselves. Remember, using a CTC to test your variety is voluntary.

The use of CTCs recognises the advantages of testing a larger number of candidate varieties (with a larger number of comparators) in a single comprehensive trial. Not only is there an increase in scientific rigour but also there are substantial economies of scale and commensurate cost savings. A CTC will establish, conduct and report each trial on behalf of the applicant.

The PBR office has amended its fees so that cost savings can be passed to applicants who choose to test their varieties in a CTC. Accordingly, when 5 or more candidate varieties of the same genus are tested simultaneously, each will qualify for the CTC examination fee of \$800. This is a saving of nearly 40% over the normal fee of \$1400.

Trials containing less than 5 candidate varieties capable of being examined simultaneously will not be considered as Centralised test trials regardless of the authorisation of the facility. Candidate varieties in non-qualifying small trials will not qualify for CTC reduction of examination fees.

Establishments wishing to be authorised as a CTC may apply in writing to the PBR office outlining their claims against the selection criteria. Initially, only one CTC will be authorised for each genus. Exemptions to this rule can be claimed due to special circumstances, industry needs and quarantine regulations. Authorisations will be reviewed periodically.

Authorisation of CTCs is not aimed solely at large research institutions. Smaller establishments with appropriate facilities and experience can also apply for CTC status. There is no cost for authorisation as a CTC.

APPLICATIONS FOR AUTHORISATION AS A 'CENTRALISED TESTING CENTRE'

Establishments interested in gaining authorisation as a Centralised Testing Centre should apply in writing addressing each of the Conditions and Selection Criteria outlined below.

Conditions and Selection Criteria

To be authorised as a CTC, the following conditions and criteria will need to be met:

Appropriate facilities

While in part determined by the genera being tested, all establishments must have facilities that allow the conduct and completion of moderate to large-scale scientific experiments without undue environmental influences. Again dependent on genera, a range of complementary testing and propagation facilities (e.g. outdoor, glasshouse, shadehouse, tissue culture stations) is desirable.

Experienced staff

Adequately trained staff, and access to appropriately accredited Qualified Persons, with a history of successful PVR/PBR applications will need to be available for all stages of the trial from planting to the presentation of the

analysed data. These staff will require the authority to ensure timely maintenance of the trial. Where provided by the PBR office, the protocol and technical guidelines for the conduct of the trial must be followed.

Substantial industry support

Normally the establishment will be recognised by a state or national industry society or association. This may include/be replaced by a written commitment from major nurseries or other applicants, who have a history of regularly making applications for PBR in Australia, to use the facility.

Capability for long-term storage of genetic material

Depending upon the genus, a CTC must be in a position to make a long-term commitment to collect and maintain, at minimal cost, genetic resources of vegetatively propagated species as a source of comparative varieties. Applicants indicating a willingness to act as a national genetic resource centre in perpetuity will be favoured.

Contract testing for 3rd Parties

Unless exempted in writing by the PBR office operators of a CTC must be prepared to test varieties submitted by a third party.

Relationship between CTC and 3rd Parties

A formal arrangement between the CTC and any third party including fees for service will need to be prepared and signed before the commencement of the trial. It will include among other things: how the plant material will be delivered (e.g. date, stage of development plant, condition etc); allow the applicant and/or their agent and QP access to the site during normal working hours; and release the use of all trial data to the owners of the varieties included in the trial.

One trial at a time

Unless exempted in writing by the PBR office, all candidates and comparators should be tested in a single trial.

One CTC per genus

Normally only one CTC will be authorised to test a genus. Special circumstances may exist (environmental factors, quarantine etc) to allow more than one CTC per genus, though a special case will need to be made to the PBR office. More than one CTC maybe allowed for roses.

One CTC may be authorised to test more than one genus.
Authorisations for each genus will be reviewed periodically.

Authorised Centralised Test Centres (CTCs)

Following publication of applications for accreditation and ensuing public comment, the following organisations/individuals are authorised to act as CTCs. Any special conditions are also listed.

Name	Location	Approved Genera	Facilities	Name of QP	Date of accreditation
Agriculture Victoria, National Potato Improvement Centre	Toolangi, VIC	Potato	Outdoor, field, greenhouse, tissue culture laboratory	R Kirkham	31/3/97
Bureau of Sugar Experiment Stations	Cairns, Tully, Ingham, Ayr, Mackay, Bundaberg, Brisbane QLD	<i>Saccharum</i>	Field, glasshouse, tissue culture, pathology	G Piperidis	30/6/97

Ball Australia	Keysborough, VIC	<i>Impatiens, Verbena</i>	Controlled climate glasshouse and environment rooms, germination chamber, quarantine house, cool storage, irrigation and outdoor facilities.	M Lunghusen	30/9/04
Floreta Pty Ltd	Redland Bay QLD	<i>Bracteantha</i>	Purpose built, secure greenhouse, access to fog house, registered quarantine facility on site.	K Bunker	31/12/04
Boulevard Nurseries Mildura Pty Ltd	Irymple VIC	<i>Zantedeschia</i>	Glasshouse, shade house, propagation facilities, field areas, irrigation, cool rooms, tissue culture lab, hydroponics, quarantine facilities	K Mullins	31/12/04

Buchanan's Nursery	Hodgsonvale, QLD	<i>Prunus</i>	Outdoor facilities including a collection of 90 varieties of common knowledge.	P Buchanan	31/12/04
Ball Australia	Keysborough, VIC	<i>Calibrachoa, Osteospermum</i>	Controlled climate glasshouse and environment rooms, germination chamber, quarantine house, cool storage, irrigation and outdoor facilities.	M Lunghusen	30/9/05
Queensland Department of Primary Industries, Southedge Research Centre	Mareeba, QLD	<i>Mangifera</i>	Glasshouse, shadehouse, laboratory complex including biotech, propagation, outdoor facilities	I Bally	30/09/05
Blueberry Farms of Australia	Corindi Beach NSW and optional sites Tumbarumba NSW and Tasmania	<i>Vaccinium</i>	Extensive irrigated growing beds. Birds, hail and frost protection. Post harvest facilities including cool rooms. Access to tissue culture laboratories.	I Paananen	15/10/07
Ball Australia	Keysborough, VIC	<i>Kalanchoe</i>	Controlled climate glasshouse and environment rooms, germination chamber, quarantine house, cool storage, irrigation and outdoor facilities.	M Lunghusen	3/6/2008
PBseeds	Horsham, VIC	<i>Lens culinaris</i>	Glasshouse, shadehouse, small plot equipment, seed production, processing and long term storage	T Leonforte G Kadkol	5/7/11
Mansfield Propagation Nursery Pty Ltd	Carrum Downes and Skye, VIC	<i>Lomandra</i>	Propagation greenhouses and indoor and outdoor growing areas.	M Lunghusen	7/11/11
Ramm Botanicals	Kangy Angy, NSW	<i>Anigozanthos</i>	Tissue culture, environment controlled greenhouse; extensive outdoor and shadehouse areas.	Ryan Weber Megan Bartley	10/2/12
Outback Plants Pty Ltd	Cranbourne, and Longwarry VIC	<i>Aloe</i>	Propagation greenhouses and indoor and outdoor growing areas.	M Lunghusen	10/12/12
Solan Pty Ltd	Waikerie SA	<i>Solanum tuberosum</i>	Tissue culture, plastic covered nursery, refrigerated storage; experience with comparator growing trials	J. Fennell	10/1/13

The following applications are pending:

Name	Location	Genera applied for	Facilities	Name of QP
Highsun Express**	Ormiston and Toowoomba	<i>Pelargonium, Verbena and Petunia</i>	Climate controlled greenhouses, shade houses, outdoor growing areas, germination	D Singh M Zorin

			chambers, cool rooms, an approved quarantine facility	
Yates Botanical Pty Ltd**	Somersby and Tuggerah, NSW	<i>Rosa</i>	Tissue culture lab, glasshouse, quarantine and nursery facilities	I Paananen
Aussie Winners Pty Ltd	Redland Bay, QLD	<i>Fuchsia</i>	Comprehensive growing facilities	I Paananen
Schreurs Australia Pty Ltd**	Leppington, NSW	<i>Rosa</i>	Comprehensive growing facilities	I Paananen

** = Please note that these organisations have been requested to submit a special case based on technical reasons and other grounds to allow an additional CTCs to be accredited for the genera in question. Accordingly, publication of their pending application does not infer that any decision regarding accreditation has been made at this time.

† = Following the 2012 restructuring within the Queensland Government, the CTC for *Cynodon*, *Zoysia* and other selected warm season-season turf and amenity species at Cleveland, Queensland previously conducted by Department of Primary Industries, Redlands Research Station, will now be run at the same location by Turf Australia.

Comments (both for or against) either the continued accreditation of a CTC or applications to become a CTC are invited. Written comments are confidential and should be addressed to:

Closing date for comment: 30 June 2013.

APPENDIX 7

List of Classes for Variety Denomination Purposes

UPOV Variety Denomination Classes: (UPOV/INF/12/1: ANNEX I)

A Variety Denomination Should not be Used More than Once in the Same Class

For the purposes of providing guidance on the third and fourth sentences of paragraph 2 of Article 20 of the 1991 Act and of Article 13 of the 1978 Act and the 1961 Convention, variety denomination classes have been developed. A variety denomination should not be used more than once in the same class. The classes have been developed such that the botanical taxa within the same class are considered to be closely related and/or liable to mislead or to cause confusion concerning the identity of the variety.

The variety denomination classes are as follows:

(a) General Rule (one genus / one class): for genera and species not covered by the List of Classes in this Annex, a genus is considered to be a class;

(b) Exceptions to the General Rule (list of classes):

(i) classes within a genus: List of classes in this Annex: Part I;

(ii) classes encompassing more than one genus: List of classes in this Annex: Part II.

LIST OF CLASSES

Part I*Classes within a genus*

	<u>Botanical names</u>	<u>UPOV codes</u>
Class 1.1	Brassica oleracea	BRASS_OLE
Class 1.2	Brassica other than Brassica oleracea	other than BRASS_OLE
Class 2.1	Beta vulgaris L. var. alba DC., Beta vulgaris L. var. altissima	BETAA_VUL_GVA; BETAA_VUL_GVS
Class 2.2	Beta vulgaris ssp. vulgaris var. conditiva Alef. (syn.: B. vulgaris L. var. rubra L.), B. vulgaris L. var. cicla L., B. vulgaris L. ssp. vulgaris var. vulgaris	BETAA_VUL_GVC; BETAA_VUL_GVF
Class 2.3	Beta other than classes 2.1 and 2.2.	other than classes 2.1 and 2.2
Class 3.1	Cucumis sativus	CUCUM_SAT
Class 3.2	Cucumis melo	CUCUM_MEL
Class 3.3	Cucumis other than classes 3.1 and 3.2	other than classes 3.1 and 3.2
Class 4.1	Solanum tuberosum L.	SOLAN_TUB
Class 4.2	Solanum other than class 4.1	other than class 4.1

LIST OF CLASSES (Continuation)

Part II*Classes encompassing more than one genus*

	<u>Botanical names</u>	<u>UPOV codes</u>
Class 201	Secale, Triticale, Triticum	SECAL; TRITL; TRITI
Class 202	Panicum, Setaria	PANIC; SETAR
Class 203*	Agrostis, Dactylis, Festuca, Festulolium, Lolium, Phalaris, Phleum and Poa	AGROS; DCTLS; FESTU; FESTL; LOLIU; PHALR; PHLEU; POAAA
Class 204*	Lotus, Medicago, Ornithopus, Onobrychis, Trifolium	LOTUS; MEDIC; ORNTP; ONOBR; TRFOL
Class 205	Cichorium, Lactuca	CICHO; LACTU
Class 206	Petunia and Calibrachoa	PETUN; CALIB
Class 207	Chrysanthemum and Ajanía	CHRYS; AJANI
Class 208	(Statice) Goniolimon, Limonium, Psylliostachys	GONIO; LIMON; PSYLL_
Class 209	(Waxflower) Chamelaucium, Verticordia	CHMLC; VERTI; VECHM
Class 210	Jamesbrittania and Sutera	JAMES; SUTER
Class 211	Edible Mushrooms Agaricus bisporus Agaricus blazei Agrocybe cylindracea Auricularia auricula Auricularia polytricha (Mont.) Sacc. Dictyophora indusiata (Ventenat:Persoon) Fischer Flammulina velutipes Ganoderma lucidum (Leys:Fries) Karsten Grifola frondosa Hericium erinaceum Hypsizigus marmoreus Hypsizigus ulmarius Lentinula edodes Lepista nuda (Bulliard:Fries) Cooke Lepista sordida (Schumacher:Fries) Singer Lyophyllum decastes Lyophyllum shimeji (Kawamura) Hongo Meripilus giganteus (Persoon:Fries) Karten Mycoleptodonoides aitchisonii (Berkeley) Maas Geesteranus Naematoloma sublateritium Panellus serotinus Pholiota adiposa Pholiota nameko Pleurotus cornucopiae var.citrinoileatus Pleurotus cystidiosus Pleurotus cystidiosus subsp. Abalonus Pleurotus eryngii Pleurotus ostreatus Pleurotus pulmonarius Polyporus tuberaster (Jacquin ex Persoon) Fries Sparassis crispa (Wulfen) Fries Tricholoma giganteum Masee	AGARI_BIS AGARI_BLA AGROC_CYL AURIC_AUR AURIC_POL DICTP_IND FLAMM_VEL GANOD_LUC GRIFO_FRO HERIC_ERI HYPsi_MAR HYPsi_ULM LENTI_ELO LEPIS_NUD LEPIS_SOR LYOPH_DEC LYOPH_SHI MERIP_GIG MYCOL_AIT NAEMA_SUB PANEL_SER PHLIO_ADI PHLIO_NAM PLEUR_COR PLEUR_CYS PLEUR_CYS_ABA PLEUR_ERY PLEUR_ERY PLEUR_ERY PLEUR_ERY PLEUR_ERY PLEUR_ERY PLEUR_ERY PLEUR_ERY POLYO_TUB SPARA_CRI MACRO_GIG

* Classes 203 and 204 are not solely established on the basis of closely related species.

APPENDIX 8**REGISTER OF PLANT VARIETIES**

Register of Plant Varieties contains the legal description of the varieties granted Plant Breeder's Rights. A person may inspect the Register at any reasonable time. Following are the contact details for Registers (1988-2000) kept in each state and territories*

South Australia

Ms Lisa Halskov
AQIS
8 Butler Street
PORT ADELAIDE SA 5000
Phone 08 8305 9706

New South Wales

Mr. Alex Jabs
General Services
AQIS
2 Hayes Road
ROSEBERY NSW 2018
Phone 02 9364 7293

Victoria and Tasmania

Mr. Colin Hall
AQIS
Building D, 2nd Floor
World Trade Centre
Flinders Street
MELBOURNE VIC 3005
Phone 03 9246 6810

Queensland

Mr. Ian Haseler
AQIS
2nd Floor
433 Boundary Street
SPRING HILL QLD 4000
Phone 07 3246 8755

Australian Capital Territory, Northern Territory and Western Australia

ACT and NT Registers are kept
in the Library of PBR Office in Canberra
Phone (02) 6283 2999

* In accordance with an amendment to section 61 of Plant Breeder's Rights Act, from 2002 the Register of Plant Varieties will be available from the Library of PBR Office in Canberra. The Register is also electronically available from the PBR website at http://pericles.ipaustralia.gov.au/pbr_db/
